John Markoff, 2015-08-25 Robots are poised to transform today's society as completely as the Internet did twenty years ago. Pulitzer prize winning New York Times science writer John Markoff argues that we must decide to design ourselves into our future or risk being excluded from it altogether. In the past decade Google introduced us to driverless cars, Apple debuted Siri, a personal assistant that we keep in our pockets, and an Internet of Things connected the smaller tasks of everyday life to the farthest reaches of the Web. Robots have become an integral part of society on the battlefield and the road, in business, education, and health care. Cheap sensors and powerful computers will ensure that in the coming years these robots will act on their own. This new era offers the promise of immensely powerful machines, but it also reframes a question first raised more than half a century ago: when the intelligent machine was born, will we control these systems or will they control us? In *Machines of Loving Grace*, John Markoff offers a sweeping history of the complicated and evolving relationship between humans and computers. In recent years, the pace of technological change has accelerated dramatically, posing an ethical quandary: If humans delegate decisions to machines, who will be responsible for the consequences? As Markoff chronicles the history of automation from the birth of artificial intelligence and intelligence augmentation communities in the 1950s and 1960s to the modern-day brain trusts at Google and Apple in Silicon Valley, and on to the expanding robotics economy around Boston, he traces the different ways developers have addressed this fundamental problem and urges them to carefully consider the consequences of their work. We are on the brink of the next stage of the computer revolution, Markoff argues, and robots will profoundly transform modern life. Yet it remains for us to determine whether this new world will be a utopia. Moreover, it is now incumbent upon the designers of these robots to draw a bright line between what is human and what is machine. After nearly forty years covering the tech industry, Markoff offers an unmatched perspective on the most drastic technology-driven societal shifts since the introduction of the Internet. *Machines of Loving Grace* draws on an extensive array of research and interviews to present an eye-opening history of one of the most pressing questions of our time and urges us to remember that we still have the opportunity to design ourselves into the future before it's too late.

WTF? Tim O'Reilly, 2017-10-10 Can we master the technologies we create before they master us? A punchy and provocative assessment by one of Silicon Valley's sharpest observers. Financial Times: WTF can be an expression of amazement or of dismay, and today's technology elicits both reactions. In this book, Tim O'Reilly, dubbed the Oracle of Silicon Valley by Inc magazine, explores the upsides and potential downsides of today's WTF technologies. What is the future when an

increasing number of jobs can be performed by intelligent machines instead of people or done only by people in partnership with those machines What happens to our consumer based societies to workers and the companies that depend on their purchasing power Is income inequality and unemployment an inevitable consequence of technological advancement or are there paths to a better future What will happen to business when technology enabled networks and marketplaces are better at deploying talent than traditional companies How should companies organize themselves to take advantage of these new tools What s the future of education when on demand learning outperforms traditional institutions How can individuals adapt and retrain Will the fundamental social safety nets of the developed world survive the transition and if not what will replace them O Reilly is the man who can really can make a whole industry happen according to former Google CEO Eric Schmidt and for decades he s identified and helped shape our response to emerging technologies with world shaking potential from the World Wide Web to Big Data and AI Here he shares the techniques he s used at O Reilly Media to anticipate innovation waves and provides a framework for thinking about how current innovations are changing the nature of business education government financial markets and the economy as a whole He helps us understand how the parts of digital businesses work together to create marketplace advantage and customer value and why ultimately they cannot succeed unless their ecosystem succeeds along with them O Reilly exhorts businesses to DO MORE with technology rather than just using it to cut costs and enrich their shareholders Robots are going to take our jobs they say O Reilly replies Only if that s what we ask them to do Technology is the solution to human problems and we won t run out of work till we run out of problems Whether technology brings the WTF of wonder or the WTF of dismay isn t inevitable It s up to us A compelling narrative of how technology interweaves with the real world If it can cajole even a few tech titans to dwell on the social and political impact of what they do then it will have served a useful purpose Financial Times WTF is a book about technology as it was as it is and as it could be It is told from the perspective of someone who has been personally present at the most important moments in the fast paced history of tech and who played a significant role in those moments Please do read this book Cory Doctorow Boing Boing
