*Blockchain and Artificial Intelligence* Tom James, 2021-08-23 Blockchain and artificial intelligence are perhaps the two most significant disruptive technologies this century and both will significantly rewire the world of global financial markets and the world in which we live While blockchain offers a number of significant advantages over traditional forms of finance including lower cost and massive increases in operational efficiencies of traded markets property records and a whole host of transaction processes artificial intelligence is moving fast from basic structured machine learning doing menial yet important big data tasks like credit card fraud detection to predictive analysis and real time real world risk management and investment decision making There is still a lot of confusion in the market about cryptocurrencies bitcoin and the underlying blockchain technology Blockchain and Artificial Intelligence highlights the underlying technologies of blockchain and the differences between cryptocurrencies and blockchain financial applications It explores the current AI offerings and gives a vision of the fast moving developments in this area including the many solutions that are expected to revolutionize the way financial and commodity markets will operate in the future

**Intelligent Automation** Marie Myers, Carol Brace, Lila Carden, 2023-11-13 Since prehistoric times humans have invented ways to simplify daily activities to improve productivity The most recent milestone in this journey is robotic process automation RPA helping to build software robots that can be leveraged to automate mundane and repetitive tasks that can be labor intensive and prone to errors In recent years RPA has been integrated with emerging artificial intelligence AI and machine learning ML technologies to create what is referred to as intelligent automation IA emulating human actions and decision making abilities This book addresses the critical questions about the rise usage and future of IA practices This book is structured by general personas considered as its primary target audience ranging from Early stage practitioners seeking to learn effective management of IA programs Established IA practitioners seeking to drive maturity and scale Business leaders seeking to understand how to drive business value using IA Practitioners or academicians seeking to collaborate This book is strongly recommended for practitioners seeking to plan implement and scale IA practices in their organization and for researchers and students who intend to study strategy implementation and management of IA practice to accelerate the digital transformation agenda

Conversational Artificial Intelligence Romil Rawat, Rajesh Kumar Chakrawarti, Sanjaya Kumar Sarangi, Anand Rajavat, Mary Sowjanya Alamanda, Kotagiri Srividya, K. Sakthidasan Sankaran, 2024-01-30 This book reviews present state of the art research related to the security of cloud computing including developments in conversational AI applications It is particularly suited for those that bridge the academic world and industry allowing readers to understand the security concerns in advanced security solutions for conversational AI in the cloud platform domain by reviewing present and evolving security solutions their limitations and future research directions Conversational AI combines natural language processing NLP with traditional software like chatbots voice assistants or an interactive voice recognition system to help customers through either a spoken

or typed interface Conversational chatbots that respond to questions promptly and accurately to help customers are a fascinating development since they make the customer service industry somewhat self sufficient A well automated chatbot can decimate staffing needs but creating one is a time consuming process Voice recognition technologies are becoming more critical as AI assistants like Alexa become more popular Chatbots in the corporate world have advanced technical connections with clients thanks to improvements in artificial intelligence However these chatbots increased access to sensitive information has raised serious security concerns Threats are one time events such as malware and DDOS Distributed Denial of Service assaults Targeted strikes on companies are familiar and frequently lock workers out User privacy violations are becoming more common emphasizing the dangers of employing chatbots Vulnerabilities are systemic problems that enable thieves to break in Vulnerabilities allow threats to enter the system hence they are inextricably linked Malicious chatbots are widely used to spam and advertise in chat rooms by imitating human behavior and discussions or to trick individuals into disclosing personal information like bank account details
