B2B Marketing Guidebook - Vol. 2 Uwe Seebacher, 2025-08-11 The future of B2B marketing isn't coming; it's already here. The second volume of the significantly updated edition of B2B Marketing dives deep into the execution layer of modern marketing. This edition is packed with AI/PI-driven methods, advanced digital tactics, and best-in-class case studies from global leading companies such as Daikin, Mayr-Predictores, SK Laser, Thyssenkrupp, and W. Rth to help B2B professionals scale growth, deepen relevance, and lead in a data-first world. Whether building a smarter lead generation engine, optimizing touchpoints, embracing account-based strategies, or navigating social selling and influencer marketing, this book provides the frameworks, tools, and insights to turn vision into reality. Readers will learn how to ignite digital growth, master touchpoint performance management, and align content strategy with AI. Essential for CMOs, marketing professionals, strategists, and consultants, this volume is a must-have for moving from theory to results. Volume 1 gave you the roadmap; Volume 2 gives you the tools to drive it.

Artificial Intelligence and Universal Values Jay Friedenber, 2024-07-14 The field of value alignment, or more broadly machine ethics, is becoming increasingly important as artificial intelligence developments accelerate. By alignment, we mean giving a generally intelligent software system the capability to act in ways that are beneficial or at least minimally harmful to humans. There are a large number of techniques that are being experimented with, but this work often fails to specify what values exactly we should be aligning. When making a decision, an agent is supposed to maximize the expected utility of its value function. Classically, this has been referred to as happiness, but this is just one of many things that people value. In order to resolve this issue, we need to determine a set of human values that represent humanity's interests. Although this problem might seem intractable, research shows that people of various cultures and religions actually share more in common than they realize. In this book, we review world religions, moral philosophy, and evolutionary psychology to elucidate a common set of shared values. We then show how these values can be used to address the alignment problem and conclude with problems and goals for future research. The key audience for this book will be researchers in the field of ethics and artificial intelligence who are interested in or working on this problem. These people will come from various professions and include philosophers, computer programmers, and psychologists, as the problem itself is multi-disciplinary.

Generative AI and Education B. Mairéad Pratschke, 2024-08-27 This volume addresses the gap in knowledge around generative AI and its applications in education. It draws on the recent history of technological innovation and digital pedagogies, locating generative AI in the contemporary discourse around education futures. It argues that a new hybrid model of education is emerging, requiring educational institutions to embed generative AI into course and programme design, delivery, and assessment. It also proposes a shift from a focus on learning as output to learning as a process and explores what that shift might look like. Grounded in educational theory, it offers actionable pedagogy-informed guidance on how to position AI as a collaborator in the construction of learning in a manner that is congruent with the values and aims of

education It offers advice based on evidence based digital pedagogy including frameworks for effective teaching and learning with generative AI that enable educators and designers to put these ideas into practice The book also explores the wider context informing this shift connecting narratives from governments and industry leaders on the strategic importance of generative AI and lifelong learning learning agility and future skills that make the case for the integration of competency based assessment into mainstream education Finally going beyond pedagogy and practice it considers some of the broader issues including limitations and ethics and the implications of integrating generative AI into institutional planning and design and includes a sample roadmap for education leaders to start the process of integrating generative AI into their institutions This work approaches the topic of generative AI from the vantage point of educators by addressing themes and concerns that will resonate with professionals in the sector
