Gumbs,2024-12-23 This book has two heroes the surgeon and the robot The education system and intelligence can create a human who is specialized in surgery While the accurate analysis of data with machine learning AI can create a more autonomous robot for surgery Currently robots still require human input in the decision making loop whether or not this will always be the case is an issue that still needs to be debated analyzed and studied preferably by computer scientists AND surgeons Surgeons and their patients are increasingly opting for less invasive surgeries However among their many advantages there is an important issue less invasiveness always means limited access to direct information from the operating field 3D image local palpation sensations all information about the whole patient and feedback from the accompanying team during teleoperation To increase precision we are increasingly using surgical robots and mechatronic instruments The less invasive the surgery and the greater the precision of robotic micro instruments the greater the role of artificial intelligence methods especially machine learning which supports the surgeon in making decisions planning and performing the procedure The development of artificial intelligence and further evidence of its effectiveness in various application fields mean that the work of a doctor is changing today In the book we address the issue of AI surgery asking whether this means that an AI surgeon will be created A key question about autonomous surgical robots will come up regularly how far can we go with their autonomy while maintaining safe and effective procedures The book provides useful information on both early successes failures and expectations related to the development of new technologies in surgery It is a guide written by various experts intended for a wide audience from medical development planners through students to doctors and decision makers Revolutionizing AI and Robotics in the Oil and Gas Industry Abdullayev, Vugar,Khang, Alex,2025-04-23 The oil and gas industry remains the main source of energy and is one of the valuable areas of the energy market In this sector the replacement of human labor by technology is particularly important for the implementation of all stages With the application of smart technology it was possible to replace not only the physical aspect of human labor but also a number of mental activities The integration of smart technology such as artificial intelligence AI and robotics has made it possible to automate processes such as design risk assessment forecasting ensuring safety and optimizing production Revolutionizing AI and Robotics in the Oil and Gas Industry addresses all aspects and principles of the joint integration of AI and Robotics for process automation in the oil and gas industry It discusses the modern environment created by the integration of digital technologies into this field the extent to which progress has been made with the automation of processes through AI and the consequences of the application of robotics and
