[Customer Service](#) Branislav Bozanic, 2025-04-01 In 2021 Uber was expanding at a staggering rate but growth came at a cost After pandemic related restrictions eased the multinational American transportation company faced severe driver shortages and regulatory hurdles that slowed the hiring of new drivers Wait times surged prices fluctuated and customer frustration grew One of the biggest bottlenecks was due to customer support The high volume of tickets coming in across multiple channels required manual processing And therein lay their problem Even Uber couldn't keep up with all the customer support demands This resulted in slow response times inconsistent resolutions and high operational costs However their team didn't panic There was an obvious solution AI driven technologies More precisely an AI powered robotic process automation RPA system Uber quickly implemented RPA to categorize tickets and handle repetitive and time consuming

customer support tasks The results Processing time for common issues dropped from days to minutes Customer satisfaction skyrocketed with faster response times Cost savings were massive with the company revenue growing from 17 to 32 billion US dollars the following year 1 Thanks to chatbots and now AI agents automating customer service is getting easier cheaper and more scalable These digital assistants can answer customer questions and automate simple tasks based on a specific set of data But only one of them can also make dynamic decisions plan actions and even learn from experiences offering unparalleled service Curious to know which one is the all around solution that is more suitable for the B2B ecosystem This ebook aims to demystify the differences between AI Agents and AI Chatbots provide their respective benefits and help businesses make the right choice according to their unique customer service requirements **Increase sales and lead generation with AI and chatbots** Krzysztof Wroblewski,2023-07-10 To grow your ecommerce business you need to gain more clients And to achieve it you have to provide high quality customer experience Sounds logical But the more visitors on your website the more questions your support agents have to handle And here is the challenge you need to face to successfully grow your store How to serve more clients answer more questions and maintain the highquality of support at the same time There are two ways The first is to constantly hire new support agents It probably will work but the cost you ll have to take for constantly recruiting and training new employees will be huge The second way is connected to technology that took the ecommerce industry and not only this one by a storm and will stay with us for a long time If not forever The AI Science Citation Index ,1994 Vols for 1964 have guides and journal lists **AI Chatbots in Customer Service** Evgeny Kagan, Maqbool Dada, Brett Hathaway,2022 Despite recent advances in language processing algorithms chatbot technology continues to face adoption hurdles We survey chatbot users about their experiences and use their testimonies to construct a decision model of customer choice between the chatbot service channel and the live agent service channel The fundamentals of this choice are the time spent in line and in service the chatbot s success rate and the qualitative differences in the service experience provided by the chatbot and by the live agent We then conduct experiments in which participants choose and then experience the chatbot or the live agent channel as we vary operational i e times spent and chatbot success rates and qualitative features of the chatbot We find that users respond positively to improvements in chatbot operational performance however the chatbot channel remains underutilized relative to what expected time minimization would predict Additional experiments show that this underutilization is caused by two separate mechanisms algorithm aversion aversion to an algorithmic service provider and gatekeeper aversion aversion to any service format that may involve multiple stages Examining potential remedies we find that algorithm aversion can be mitigated by making salient the expected time savings offered by the chatbot However gatekeeper aversion is more persistent and harder to overcome We conclude by building and estimating a structural model of channel demand and by proposing a behavior aware service design that reduces the firm s staffing costs by up to 22% ChatGPT Cash | How to Build a \$5K/Month Side Business Using AI Tools (Without Coding)
