American Journalism Review ,2004 **Push** Mike D'Errico, 2022 Push Software Design and the Cultural Politics of Music Production shows how changes in the design of music software in the first decades of the twenty first century shaped the production techniques and performance practices of artists working across media from hip hop and electronic dance music to video games and mobile apps Emerging alongside developments in digital music distribution such as peer to peer file sharing and the MP3 format digital audio workstations like FL Studio and

Ableton Live introduced design affordances that encouraged rapid music creation workflows through flashy user friendly interfaces Meanwhile software such as Avid s Pro Tools attempted to protect its status as the industry standard professional DAW of choice by incorporating design elements from pre digital music technologies Other software like Cycling 74 s Max asserted its alterity to commercial DAWs by presenting users with nothing but a blank screen These are more than just aesthetic design choices Push examines the social cultural and political values designed into music software and how those values become embodied by musical communities through production and performance It reveals ties between the maximalist design of FL Studio skeuomorphic design in Pro Tools and gender inequity in the music products industry It connects the computational thinking required by Max as well as iZotope s innovations in artificial intelligence with the cultural politics of Silicon Valley s design thinking Finally it thinks through what happens when software becomes hardware and users externalize their screens through the use of MIDI controllers mobile media and video game controllers Amidst the perpetual upgrade culture of music technology Push provides a model for understanding software as a microcosm for the increasing convergence of globalization neoliberal capitalism and techno utopianism that has come to define our digital lives

The algorithm of the universe Ancient Philosophy,2021-11-18 There are many attempts to explain the existence of the universe Even the observable universe around us is filled with unknowns and numerous unexplainable phenomena let alone the unobservable universe Each and every theory proposed is just trying to find an explanation for the existence of the observable universe around us ignoring the fact that it is potentially possible there is an invisible universe which reveals itself as we find newer ways to observe it We need to first and foremost be able to abstract this universe as we observe it to be just a representation of something else underneath that is projected as this world around us by our descriptive thoughts Then and only then can we find an explanation that is inclusive of everything that the universe is As far as we search for the origin of just these appearances of descriptive thoughts we will only dabble with physics chemistry mathematics and computations It should be recognised that Wolfram introduces a very good concept Simple things recurse to form complex worlds But this without the correct transformation remains simply a recognisable pattern How does this recognisable pattern go on to become this complex appearance of reality that we observe around us is up in the air The ancient Sanskrit literature has an in depth explanation of how this reality around us works and how it has come to be this It just needs the correct context around which to translate these texts to understand it For a long time I wondered what would be the best way to explain the algorithm of the universe as seen by the ancients and explained in the Sanskrit literature I could explain it by using translation of the Sanskrit verses in a certain order But I find that they do not take the reader on the journey that is necessary to understand and form the correct thoughts to understand the working of and creation of this reality around us I thought I would write it as a description of astrology i e jyothiSha which if we look at from the ancient view is actually a science that tells us how to control the distribution of seeking which drives the formation of this reality around us and hence control this reality itself But I find that the term has been highly mangled with all sorts of meaning associated with it I find even if there was a very beautiful science explained it becomes very difficult to break these pre conceived perceptions to get the reader to read objectively and understand Finally I have decided the best way is to use the computers that we have created and the AI algorithms that we are trying to code as the best way to describe it because this was my primary driver to want to understand the Sanskrit literature and to debug the working of the universe The underlying curiosity to understand why and how the AI that we write does not even seem to be a fake imitation of the working of the universe around us The underlying curiosity to understand how this reality around me is so completely immersive while the virtual reality that we create does not even come near this immersive experience that we have with reality The curiosity to understand if it is possible for us to create a hardware and software that comes even a little bit close to the kind of intelligence knowledge and beauty in the algorithm of this reality around us This has been my driver to decode and understand the Sanskrit literature So

I find that is the best way to describe the algorithm In this book I explain the algorithms proposed in the Sanskrit literatures for the working of this reality around us I also compare these concepts to what we have currently present in computers and explain how they are different from what is explained in these books and why what we have in computers are not sufficient to create the AI that we want to create Further I try to put down my thoughts on how or what can be done to create a system that can be used to implement a AI system
