### **Climate Change Policy After Kyoto A Blueprint For A Realistic Approach:**

Climate Change Policy after Kyoto Warwick J. McKibbin, Peter J. Wilcoxon, 2002-12-16 The Kyoto Protocol represents nearly a decade of international effort to reduce carbon emissions While the treaty is the product of enormous international political effort it has not been ratified by any major greenhouse emitter and it has been rejected by the United States In this controversial new book Warwick J McKibbin and Peter Wilcoxon argue that the current approach of international negotiations on the Kyoto Protocol is going completely in the wrong direction In *Climate Change Policy after Kyoto* they attempt to steer the policy debate toward a realistic blueprint for effective policy The authors believe that managing uncertainty particularly the future costs of any plan is key to realistic climate policy They maintain that sustainable policy should meet four basic criteria it should slow down carbon dioxide emissions where it is cost effective to do so compensate those who are hurt economically require a high degree of consensus both domestically and internationally and allow countries to enter the program easily and continue to participate even if they drop out of the agreement at certain times The book summarizes the current state of knowledge about climate change and discusses the history of negotiations since 1992 in the process identifying the Kyoto Protocol as the wrong approach to the problem It outlines important insights that economic theory offers for the design of climate policy and uses those insights to develop a simple framework that will reduce greenhouse gas emissions while guaranteeing that short run costs of compliance will not be excessive The authors conclude by outlining a process by which international negotiations on climate control can proceed to an agreement that is both durable and feasible for all nations

**Innovation Pathways to Sustainability** Michael Lester, Marie dela Rama, 2024-08-09 The book offers insights into reconciling innovation with sustainability and identifying key stakeholders responsible for the reconciliation Through conversations with experts in various fields the intersection of innovation sustainability governance and complex systems in a rapidly changing climate driven world is discussed Countries around the world face the urgent existential challenge to tackle climate change and CO2 emissions In its discussions of case studies of key economic sectors in Australia this book focuses on the emerging experience with harnessing innovation to sustainability The interdisciplinary approach to the complexity of climate change and policy making provides readers an opportunity for thoughtful discussions and lessons to be learnt from multiple angles This is a vital resource for scholars in climate studies innovation and sustainability that also confronts important challenges facing policymakers government and society

**Handbook of Computable General Equilibrium Modeling** Peter B. Dixon, Dale Jorgenson, 2012-12-04 Top scholars synthesize and analyze scholarship on this widely used tool of policy analysis in 27 articles setting forth its accomplishments difficulties and means of implementation Though CGE modeling does not play a prominent role in top U S graduate schools it is employed universally in the development of economic policy This collection is particularly important because it presents a history of modeling applications and examines competing points of view Presents coherent summaries of CGE theories that

inform major model types Covers the construction of CGE databases model solving and computer assisted interpretation of results Shows how CGE modeling has made a contribution to economic policy      **Climate Change A Barrie**

Pittock,2009-03-31 It is widely accepted in the scientific community that climate change is a reality and that changes are happening with increasing rapidity In this second edition leading climate researcher Barrie Pittock revisits the effects that global warming is having on our planet in light of ever evolving scientific research Presenting all sides of the arguments about the science and possible remedies Pittock examines the latest analyses of climate change such as new and alarming observations regarding Arctic sea ice the recently published IPCC Fourth Assessment Report and the policies of the new Australian Government and how they affect the implementation of climate change initiatives New material focuses on massive investments in large scale renewables such as the kind being taken up in California as well as many smaller scale activities in individual homes and businesses which are being driven by both regulatory and market mechanisms The book includes extensive endnotes with links to ongoing and updated information as well as some new illustrations While the message is clear that climate change is here and in some areas might already be having disastrous effects there is still hope for the future and the ideas presented here will inspire people to take action Climate Change The Science Impacts and Solutions is an important reference for students in environmental or social sciences policy makers and people who are genuinely concerned about the future of our environment      **Brookings Papers on Economic Activity, 2002** William C.

Brainard,George L. Perry,2010-12 Subscribe to Brookings Papers on Economic Activity For almost thirty years Brookings Papers on Economic Activity BPEA has provided academic and business economists government officials and members of the financial and business communities with timely research of current economic issues      **Budgeting Carbon for Equity and Sustainability** Pan Jiahua,2013-01-01 Although there is no denial of climate justice there has been a persistent lack of

practical joined up actions regarding the creation of an international climate institution However politicians and academic researchers have been working together to find solutions This new book is an attempt to put forward constructive approaches to climate security and justice building upon the inputs from the wide ranging debates that took place at the CASS Forum on Climate Justice and the Carbon Budget Approach in Beijing April 2010 The purpose of this prestigious international conference was to construct an international climate regime and to help promote climate justice It also called on governments particularly governments in developed countries to bear the historical responsibility of climate change Climate change is a controversial topic worldwide today and the international regime and corresponding actions will inevitably have a lasting and profound influence on the world economy and international politics At its thirteenth session held in Bali Indonesia at the end of 2007 the Conference of the Parties to the United Nations Framework Convention on Climate Change UNFCCC adopted the Bali Action Plan initiating a new process of negotiations on long term cooperative actions under the Convention with the goal of reaching international agreements on an international climate regime beyond 2012 at

the fifteenth session of the Conference to be held in Copenhagen Denmark at the end of 2009 The key factors in the present international climate negotiations are a shared vision of global long term cooperative actions mitigation adaptation technology and finance and their core issue is how to reach an agreement for equitable burden sharing of obligations for the reduction of greenhouse gas emissions or allocation of emission entitlements in accordance with the concrete conditions of various countries and to ensure the implementation of such an agreement under an appropriate international regime As the largest developing country in the world China plays an important role in international climate negotiations and is under increasing international pressure The existing Kyoto Protocol model takes the level of emissions in 1990 as a base and determines the emission reduction obligations of each developed country through negotiation The findings gathered together in this book break through the fixed pattern of thinking of the Kyoto Protocol and based on the theory and methodology of the basic carbon emissions needed for human development studies a carbon budget proposal for global greenhouse gas emission reductions This proposal not only better embodies the principle of common but differentiated responsibilities established by the Climate Convention but will also be able to realize global goals for mid and long term emission reductions It represents a comprehensive proposal for developing a more equitable and more effective international climate regime The CASS Forum on Climate Justice and the Carbon Budget Approach in Beijing April 2010 was organised in association with the Institute for Urban and Environmental Studies of the Chinese Academy of Social Sciences Konrad Adenauer Foundation and Misereor
