Migration and Climate Change Oli Brown,International Organization for Migration,2008 This report focuses on the possible future scenarios for climate change natural disasters and migration and development looking to increase awareness and find answers to the challenges that lie ahead It states that even though it is defined as a growing crisis the consequences of climate change for human population are unclear and unpredictable The study points out that scientific basis for climate change is increasingly well established and confirms that current predictions as to the carrying capacity in large parts of the world will be compromised by climate change China's Climate-Energy Policy Akihisa Mori,2018-07-04 China's recent climate energy policy an outcome of contemporary challenges has generated conflict of interest amongst major stakeholders Coupled with a boost in demand for oil gas and coal as well as a rapid growth in wind and solar power it has not only affected domestic fossil fuel and renewable energy providers but has also provoked a resource boom affecting development pathways internationally This book therefore seeks to examine the economic social and ecological effects associated with China's climate energy policy Assessing how the policy has been and will be formulated and implemented it analyses the changing use of energy CO2 emissions and GDP as well as social and environmental impacts both domestically and internationally It presents in depth case studies on specific policies in China and on its resource exporting countries such as Indonesia Australia Myanmar and Mongolia At the same time using quantitative data it provides detailed input output and applied

computable general equilibrium analyses Arguing that China has actively advanced its climate energy policy to become a leader of global climate governance it demonstrates that China ultimately relocates the cost of its climate energy policy to resource exporting countries This book will be of great interest to students and scholars of energy the environment and sustainability as well as Chinese Studies and economics

Understanding Climate Change Feedbacks Panel on Climate Change Feedbacks, Board on Atmospheric Sciences and Climate, 2003-12-16 During the past decade scientists have learned much about the complex natural processes that influence climate variability and change and our ability to model climate has increased significantly We also have begun to better identify those parts of the climate system that are particularly important and not well understood and that therefore limit our ability to project the future evolution of Earth's climate One of these critical areas is our understanding of the role of feedbacks in the climate system and their role in determining climate sensitivity Feedbacks are processes in the climate system that can either amplify or dampen the system's response to changed forcings This study looks at what is known and not known about climate change feedbacks and seeks to identify the feedback processes most in need of improved understanding It identifies key observations needed to monitor and understand climate feedbacks discusses ways to evaluate progress in understanding climate feedbacks recommends ways to improve climate modeling and analysis for climate feedbacks research and identifies priority areas for research
