Avoiding Dangerous Climate Change Wolfgang P. Cramer,2006-02-02 This volume first published in 2006 presents findings on climate change from leading international scientists for researchers policy makers and engineers **Is global warming insurable? A comparative analysis** Peter Nicholson,2015-02-04 Diploma Thesis from the year 2010 in the subject Sociology Miscellaneous Bielefeld University language English abstract The institution of insurance as it is known today has been largely neglected by sociologists even though it is the central institution alongside government responsible for risk management Ericson et al 2003 44 A central focus of risk management is the protection of society from damage caused by natural hazards This thesis aims to frame insurance and other institutions involved with risk management into a particular viewpoint of social problems Natural hazards constitute the largest share of the market for insurance while at the same time pose the largest challenge for the institution One may question why this is so Well into the 21st century anthropogenic climate change or global warming is no longer merely a theory it has become reality International reinsurers scientists and politicians agree that anthropogenic CO₂ and other gases are increasing the temperature on earth Consequentially natural hazards are increasing in frequency and impact Munich Re 2009 This poses problems for societies dealing with impacts from natural hazards Much research has been done on individual behavior in deciding whether or not to insure against natural hazards Kunreuther 2004 Kerjan 2008a Grace 2006 This line of research views individual as myopic in assessing risk thereby underestimating risk and the relevance of insurance The emphasis of this research is mostly on the irrationality of individuals as regards the benefits of insurance This perspective fails to take into account the influence of

societal institutions on individual decisions for example whether or not to insure against disasters Theoretical exercises in this direction are common whereas attempts to consider the environment of a specific risk management system are rare Michael Huber's observation 2004a represents an exception as it describes the institutional arrangement for the management of floods in England while emphasizing the influence it has on insurability The assumption that institutions exercise an effect on the insurability of natural hazards remains central Generally when regarding natural hazards one can differentiate between those affected and those unaffected by anthropogenic climate change Natural hazards which are not amplified by global warming are earthquakes volcano eruptions and tsunamis Munich Re 2009
