Climate Trading: Development of Kyoto Protocol Markets

Author: Deborah Sewell

Publisher: Palgrave Macmillan, Basingstoke, 2005. Finance and Capital Markets series, 204 pp. Hardcover.

ISBN: 1-4039-1815-0

Reviewer: Axel Michaelowa¹

Emission trading and the market-based mechanisms of the Kyoto Protocol are becoming more and more fashionable topics for authors with the introduction of the European Union Emissions Trading System in January 2005 and the entry into force of the Kyoto Protocol the following month. From the web-based information provider PointCarbon, which offers tailor-made products for business, through traditional management literature (De Jong and Weter 2004), to academic literature (Famin 2005), all kinds of media are represented. Sewell's book takes an intermediary position between the latter two. Sewell is an old hand in the climate-policy field and thus one starts reading her book with high expectations. These are fulfilled insofar as the contents are up to date and factual errors are absent. However, the description is often a little legalistic and tedious, while references could have been more comprehensive and the degree of analysis somewhat deeper.

Sewell starts with a short description of the climate change issue and the negotiation process leading to the Kyoto Protocol. The description of the Kyoto mechanisms takes about 45 pages. Rightly, a lot of emphasis is put on reporting and monitoring rules, an often neglected issue. A chapter on domestic and regional trading schemes follows. This includes some interesting detail, such as the administration part of the Danish trading scheme and the exact design of the infamous UK auction scheme for participants in emissions trading. Aspects of emission management for industry are then discussed, including a table presenting, at what allowance prices changes in power plant use would occur. Also, the European trading, emissions and the Emissions Trading Scheme (ETS) trading systems that were the late 1990s, voluntary instruments of emissions trading are described. The chapter on adaptation programs for clean development mechanisms (CDM) and joint implementation (JI) projects is very interesting. It gives an overview of all basic and tedious, and discusses business methodologies and risks associated with developing CDM and JI projects. The World Bank and Dutch programs that started CDM and JI corporations already since 2000 and were crucial for the development of the market are assessed in detail. Thus—surprisingly—a new chapter on the global carbon market tries to summarize transactions, it

Environmental Commodities Markets and Emissions Trading Blas Luis Pérez Henríquez, 2013-03-05 Market based solutions to environmental problems offer great promise but require complex public policies that take into account the many institutional factors necessary for the market to work and that guard against the social forces that can derail good public policies Using insights about markets from the new institutional economics this book sheds light on the institutional history of the emissions trading concept as it has evolved across different contexts It makes accessible the policy design and practical implementation aspects of a key tool for fighting climate change emissions trading systems ETS for environmental control Blas Luis Pérez Henríquez analyzes past market

based environmental programs to extract lessons for the future of ETS He follows the development of the emissions trading concept as it evolved in the United States and was later applied in the multinational European Emissions Trading System and in sub national programs in the United States such as the Regional Greenhouse Gas Initiative RGGI and California's ETS This ex post evaluation of an ETS as it evolves in real time in the real world provides a valuable supplement to what is already known from theoretical arguments and simulation studies about the advantages and disadvantages of the market strategy Political cycles and political debate over the use of markets for environmental control make any form of climate policy extremely contentious Perez Henrquez argues that despite ideological disagreements the ETS approach or more popularly cap and trade policy design remains the best hope for a cost effective policy to reduce GHG emissions around the world

Climate Change, Carbon Trading and Civil Society Patrick Bond,Rehana Dada,Graham Erion,2009 Rev ed of Climate change carbon trading and civil society 2nd ed 2007 International Emission Trading Richard Baron,International Energy Agency,Organisation for Economic Co-operation and Development,2001 International emission trading will be one of the most important tools in the effort to reduce greenhouse gas emissions in the atmosphere While the private sector has embraced the concept and is well equipped to use it implementation at the international level remains incomplete This book provides a broad assessment of the issue from the perfect system envisaged in economic models to a more realistic view of how trading can actually work The review is based on market experiments and modelling undertaken by the International Energy Agency and other institutions It takes an in depth look at implications for the power generation sector and considers how developing countries could be included in a future trading regime The aim of the book is to clarify what can be expected from international emission trading in the energy sector and in other activities **Forests, Taking Root in the Voluntary Carbon Markets** ,2008 *The Market for Voluntary Carbon Emission Offsetting (VCM)* Tilman Baunach,2025-10-15 Master s Thesis from the year 2024 in the subject Environmental Sciences Sustainability grade 14 15 1 0 Justus Liebig University Giessen Agricultural Sciences Nutritional Sciences and Environmental Management course Sustainable Transition M Sc language English abstract The market for voluntary carbon emissions offsetting VCM is an unregulated open market system that offers carbon credits to investors from the private sector to compensate for their emissions and enable to promote climate neutrality Carbon credits are generated from either emission avoidance or removal project activities The VCM faces structural shortcomings in all three dimensions of the market the systemic market the supply and the demand side Multiple conflicts of interest enable systemic over crediting accompanied with questionable narratives regarding credit quality criteria

e.g. additionality, permanence, leakage leading to an oversupply of low quality credits in the market. Project specific and information regarding pricing and transactions is not transparent leading to information asymmetries, disturbed trust of investors and low public acceptance. Due to these shortcomings the current potential of the VCM to considerably contribute to global decarbonization and sustainable development is low. Certain measures however can help to increase the market's potential.

The Business of Climate Change Kathryn Begg, Frans van der Woerd, David Levy, 2018-05-08

In recent years climate change has become a leading issue on both the business and political agenda. With the Kyoto Protocol to the UN Framework Convention on Climate Change now ratified, business is bracing itself for the reality of serious regulation on the reduction of greenhouse gas emissions. The Business of Climate Change presents a state of the art analysis of corporate responses to the climate change issue. The book describes and assesses a number of recent business approaches that will help to identify effective strategies and promote the dissemination of proactive corporate practices on climate change worldwide. By identifying the factors that cause companies to pursue low carbon strategies and support the Kyoto process, the book will also be helpful to governments in formulating policy. Business and industry have a crucial role to play in the implementation of the Kyoto Protocol. They are major emitters of greenhouse gases and pressure is mounting for them to engage in a range of mitigation strategies from emission inventorying and trading schemes to investments in low carbon technologies. Behind the scenes a number of companies have started to develop strategies to curtail greenhouse gas emissions. These strategies can be very diverse in nature. At a political level companies try to influence policy implementation and more specifically to test ideas in anticipation of possible regulation on the climate change issue. At a more practical level there are a burgeoning number of initiatives to conserve energy use in production, transportation and buildings; to develop renewable sources of energy; to measure carbon emissions and sequestration at a detailed level; and to develop various markets for trading carbon credits among companies and countries. Some technologies such as hybrid cars and compact fluorescent lighting are now market realities. Common to all of these initiatives is that they operate in an environment of high complexity and uncertainty. The political implementation of the Kyoto Protocol remains uncertain and many details remain unspecified. Economic instruments such as emission trading are favoured but their mechanisms are still hotly debated and the future price of credits is unknown. New markets for low emission products and technologies are beginning to appear but there are currently few regulatory drivers to assist their development. The impact of potential regulation on business will vary tremendously between companies and sectors. The fossil fuel and energy sectors fear the economics of action while sectors such as insurance and agriculture fear the economics of inaction. Combined with the remaining uncertainties about what form climate change may take, corporate responses to reduce risks have to differentiate between sectors and have to be flexible. For individual companies these big uncertainties demand new thinking and contingency planning. The Business of Climate Change is split into four sections. Introduction and overview presents a broad perspective on business and climate
