Climate Variability And Change In High Elevation Regions:

Climate Variability and Change in High Elevation Regions, 2003 *Climate Variability and Change in High Elevation Regions: Past, Present & Future* Henry F. Diaz, 2012-12-06 Glaciers in the Andes are particularly important natural archives of present and past climatic and environmental changes in significant part because of the N S trend of this topographic barrier and its influence on the atmospheric circulation of the southern hemisphere Strong gradients in the seasonality and amount of precipitation exist between the equator and 30 S Large differences in amount east and west of the Andean divide also occur as well as a change from tropical summer precipitation additionally modified by the seasonal shift of the circulation belts to winter precipitation in the west wind belt e g Yuille 1999 Garraud and Aceituno 2001 The so called dry axis lies between the tropical and extra tropical precipitation regimes Figure 1 The high mountain desert within this axis responds most sensitively to the smallest changes in effective moisture An important hydro meteorological feature on a seasonal to inter annual time scale is the occurrence of EN SO events which strongly control the mass balance of glaciers in this area e g Wagnon et al 2001 Francou et al in press The precipitation pattern is an important factor for the interpretation of climatic and environmental records extracted from ice cores because much of this information is related to conditions at the actual time of precipitation and this is especially so for stable isotope records Several ice cores have recently been drilled to bedrock in this area From Huascanin Thompson et al 1995 Sajama Thompson et al

Dynamics of Climate Change and Water Resources of Northwestern Himalaya Rajesh Joshi, Kireet Kumar, Lok Man S Palni, 2014-12-24 This book is about the Himalayan ranges as a source of fresh water supply and a perennial store house of ice snow and permafrost as well as a vast repository of rich biodiversity in the light of climate change Special attention is given to the dynamics of snow and glaciers in the northwestern Himalayas assessment of climate change patterns and the consequences of changes and flow regime in order to understand the behaviour of climate change in the northwestern Himalayas The outcome of melting glaciers are pro glacial lakes Their increasing size and potential danger of outbursts requires systematic study particularly where there is the risk of impact on life and property Furthermore the changing trend of the hydrological cycle on a regional or local scale is another area of research which calls for the attention of geoscientists To date there is a scarcity of reliable data meaning that a concerted effort is still required by all parties

Climate Change, Glacier Response, and Vegetation Dynamics in the Himalaya RB Singh, Udo Schickhoff, Suraj Mal, 2016-06-06 This book provides information essential for anyone interested in climate and environmental change of the Himalayan region including land and resource managers environmental planners conservationists environmentalists geographers climatologists ecologists and students The book is unique in its coverage of the current understanding of the science of climate change in the Himalayan mountain system and of the major impacts on physical systems and ecosystems The book gives an overview of the physical science basis of climate change and explains drivers and processes of glacier and vegetation dynamics The book covers relevant aspects of

accelerated climate change observed in the Himalayan mountain system and highlights the regional differentiation of climatic changes and associated environmental modifications. The focus is on climate variability and change and how physical systems and ecosystems respond to climate change impacts. Consequences include impacts on physical systems such as glacier shrinkage, glacial lake outburst floods, altered hydrological characteristics, permafrost warming and thawing, and mass movements on slopes. Climate change is also a powerful stressor on ecosystems and induces range shifts of plant and animal species and alterations in terms of phenology, biomass, plant cover, plant group dominance, and species composition. Thus, ecosystem structure and functioning will be strongly affected. The book has an introductory chapter followed by a section on climate change, a section on impacts on glaciers and hydrology, and a section on vegetation dynamics. Each section has several chapters presenting key concepts, major drivers, and key processes of environmental change in the Himalayan region from different perspectives. Climate change impacts in the Himalaya have not been studied in much detail, and respective findings were not presented so far in a comprehensive overview. This book summarizes the current knowledge of interactions between climate change and the dynamics of glaciers, hydrology, and vegetation.

Routledge Handbook of Climate Change Impacts on Indigenous Peoples and Local Communities Victoria Reyes-García, 2023-12-26. This Handbook examines the diverse ways in which climate change impacts Indigenous Peoples and local communities and considers their response to these changes. While there is well-established evidence that the climate of the Earth is changing, the scarcity of instrumental data oftentimes challenges scientists' ability to detect such impacts in remote and marginalized areas of the world or in areas with scarce data. Bridging this gap, this Handbook draws on field research among Indigenous Peoples and local communities distributed across different climatic zones and relying on different livelihood activities to analyse their reports of and responses to climate change impacts. It includes contributions from a range of authors from different nationalities, disciplinary backgrounds, and positionalities, thus reflecting the diversity of approaches in the field. The Handbook is organised in two parts. Part I examines the diverse ways in which climate change alone or in interaction with other drivers of environmental change affects Indigenous Peoples and local communities. Part II examines how Indigenous Peoples and local communities are locally adapting their responses to these impacts. Overall, this book highlights Indigenous and local knowledge systems as an untapped resource which will be vital in deepening our understanding of the effects of climate change. The Routledge Handbook of Climate Change Impacts on Indigenous Peoples and Local Communities will be an essential reference text for students and scholars of climate change, anthropology, environmental studies, ethnobiology, and Indigenous studies. Himalayan Weather and Climate and their Impact on the Environment A.P. Dimri, B. Bookhagen, M. Stoffel, T. Yasunari, 2019-11-08. This book proposes a unique and comprehensive integrated synthesis of the current understanding of the science of Himalayan dynamics and its

manifestations on physical systems and ecosystems at different spatial and temporal scales In particular this work covers relevant aspects of weather and climate paleoclimate snow glacier and hydrology ecology forestry among other topics associated with the Himalayas It highlights the role of the Himalayas in defining local to regional to global scale impact on weather and climate It includes Himalayan impact on defining physical basis of changing glacier systems permafrost melting thawing climate variability and hydrological balances As a result this volume represents an important synthesized overview both for environmental and earth science researchers and for policy makers and stakeholders interested in the physical and dynamical processes associated with the Himalayan massif
