Climatic Change And Its Impacts An Overview Focusing On Switzerland:

Climatic Change and Its Impacts Martin Beniston, 2005-12-30 Climatic Change is a rapidly evolving domain that has prompted the publication of numerous scientific works in recent years reflecting both the public and scientific interest in the topic This book focuses upon climate processes variability and change and applies the general principles related to these issues particularly in Switzerland Although a small country Switzerland is characterized by complex topography where climatic processes are often enhanced due to the presence of the Alps In addition there is a remarkable density of observational data in both the natural and social sciences that enable a comprehensive assessment of climate processes their long term trends and their impacts This book draws upon recent scientific work by the author as well as by close colleagues working within scientific networks both in Switzerland and Europe in order to provide the reader with up to date information on climate processes in the course of the 20th and 21st centuries This book is intended for students from the undergraduate level onwards and researchers interested in climate issues specific to the alpine region

Climate Change in the European Alps Adapting Winter Tourism and Natural Hazards Management OECD, 2007-01-18 The first systematic cross country analysis of snow reliability of Alpine ski areas under climate change for five countries in the region France Switzerland Austria Italy and Germany

Climate Change and Water Governance Margot Hill, 2012-11-13 The book presents detailed case studies examining the Rh ne Basin in the Canton Valais Switzerland and the Aconcagua Basin in Valparaiso Chile In order to understand and assess the interplay of complex and interlinked environmental and socio economic issues the author looks beyond the technology modelling engineering and infrastructure associated with water resources management and climate change adaptation to assess the decision making environment within which water and adaptation policy and practices are devised and executed

Climate Variability, Predictability and Climate Risks Heinz Wanner, Martin Grosjean, Regine Röthlisberger, Elena Xoplaki, 2007-04-05 This book provides an integrated assessment of issues related to climate variability and change predictability and risks It details both the technical aspects of variability and abrupt climate change and the agricultural and economical impacts and consequences

Climate Variability and Extremes during the Past 100 years Stefan Brönnimann, Jürg Luterbacher, Tracy Ewen, Henry F. Diaz, Richard S. Stolarski, Urs Neu, 2007-12-20 This volume provides an up to date overview of climate variability during the 20th century in the context of natural and anthropogenic variability It compiles a number of contributions to a workshop held in Gwatt Switzerland in July 2006 dealing with different aspects of climate change variability and extremes during the past 100 years The individual contributions cover a broad range of topics The volume fills a gap in this exciting field of research

The Future of Arid Lands-Revisited Charles F. Hutchinson, Stefanie M. Herrmann, 2007-12-07 UNESCO commemorated its sixtieth anniversary in 2005 It was a year for reflection a time to look back on the progress made and the achievements accomplished over the last 60 years To celebrate the importance and relevance of science at UNESCO a publication entitled Sixty Years of Science at

UNESCO 1945 2005 was launched in 2006 which offers an insight into the organization's commitment towards and endeavors in science from the past through to the present day. Within the United Nations System UNESCO has one of the longest traditions in addressing dryland problems from a scientific point of view. As it happened, arid zones were precisely at the centre of UNESCO's earliest efforts at international scientific collaboration in the study of natural resources. The first international research program dealing with these zones was launched back in 1951 under the direction of an International Advisory Committee. It was continued until 1964 after being raised to the status of a Major Project of the Organization in 1957. This Major Project was a pioneer program in many respects. One of its merits and not the least was that it blazed a trail in its interdisciplinary approach to the study of natural resources and its holistic view of the problems of arid and semiarid zones.

The Coupling of Climate and Economic Dynamics Alain Haurie, Laurent Viguier, 2005-07-05. This book reviews the different approaches used to model the dynamic interactions between climate and economies and proposes new avenues of research. Its fourteen chapters deal with various aspects of the building of integrated assessment models either by coupling economic growth and climate change modules or using mathematical models of viability or dynamic game theory to represent the interactions between the world regions concerned.

[A Biomass Future for the North American Great Plains](#) Norman J. Rosenberg, 2007-02-15. The North American Great Plains is a major global breadbasket but its agriculture is stressed by drought, heat, damaging winds, soil erosion and declining ground water resources. Biomass production and processing on the Plains would partially restore a perennial vegetative cover and create employment opportunities. This book explores the possibility that the ecology and economy of the Plains region and similar regions would benefit from the introduction of perennial biomass crops.

Biodiversity and Climate Change Council of Europe, 2010. The effects of climate change on ecosystems are complex. The impact on the species and habitats protected by the Bern Convention may differ widely depending on the species, their habitats and location. This publication includes six expert reports presenting concrete measures for addressing the vulnerability of Europe's natural heritage in the face of climate change and its effects and how this heritage must adapt in order to survive. This publication reproduces the full text of Recommendation 135 (2008) on addressing the impacts of climate change on biodiversity adopted by the Standing Committee of the Bern Convention in November 2008, which stresses the urgent need to tackle the impact of climate change on biological diversity and on its conservation. With this publication the Council of Europe aims to increase awareness about the links between biodiversity and climate and emphasise the large potential for synergies when addressing biodiversity loss and climate change in an integrated manner.
