Clinical Perspective In Fieldwork:

The Clinical Perspective in Fieldwork Edgar H. Schein, 1987-07 Most writing on qualitative research deals with the role of the ethnographer in a given culture organization or some other setting The ethnographer is an invisible recorder of the nature of this setting unobtrusive and not affecting the daily activities in the place studied But not all qualitative research purports to be so impartial and uninvolved The clinical perspective stemming from action research is a very different animal The clinician is usually a consultant brought in specifically to effect change in an organization This kind of field researcher works under a very different set of technical and ethical restraints restraints that differentiate this kind of research from traditional ethnography at almost every point in the process from choosing a setting to establishing the research agenda gathering data and reporting results Edgar Schein well known for his work as an experienced consultant and researcher in organizational settings succinctly outlines in this essay the basics of a clinical perspective in field research how it differs from other types of qualitative research and the inherent rewards and difficulties brought on by that perspective This is one of Schein's best efforts and that's saying something The book represents the very quintessence of what a clinical perspective is all about empathy understanding humility the fragility and significance of organizational life Schein makes the clinical approach sound like an artform and for practitioners and applied scientists Schein helps us braid science and art in an elegant way I don't think there's a consultant management expert practitioner or applied scientist who would not benefit a lot from this book It's also as they say in the book trade one helluva good read Warren Bennis University of Southern California Ed Schein has written an invaluable book for both scholars and practitioners who are involved in human systems intervention at the individual group or organizational levels He not only clearly delineates the clinical perspective and its differences from the ethnographic paradigm but he also makes a case for the necessary exploration of clinical issues by all who research or consult to organizations Joanne Martin Stanford University The core of the work is a comparative analysis of the characteristics of the clinical and the research methods This is a useful exercise It draws together in one handy spot things that both clinicians and researchers need periodically to review This monograph is compact and well written The Journal of Nervous and Mental Disease Provides numerous examples of good research that will help students better understand what it means to be a qualitative researcher and to use one's self as a research informant Schein speaks personally and directly to the reader with a disarming candor and charm The considerations he gives to ethics and his criticisms of the limitations of informed consent should be read by all researchers of human behavior Qualitative Studies in Education

Case Study Methods Jacques Hamel, Stephane Dufour, Dominic Fortin, 1993-09-15 In this introduction to understanding researching and doing case studies in the social sciences Hamel outlines several differing traditions of case study research including the Chicago School of Sociology the anthropological case studies of Malinowski and the French La Play school tradition He shows how each developed changed and has been practiced over time Suggestions for the practice

of case studies are made for the novice reader and an additional feature is the extensive bibliography on case study methods in social science to allow for further exploration of the topic **Qualitative Nursing Research** Janice M. Morse, 1991

Qualitative Nursing Research addresses many of the problematic issues in qualitative research. Leading qualitative methodologists from orientations in phenomenology, grounded theory and ethnography contribute chapters on their favourite issues which also form the bases for the dialogues which alternate with each chapter. With the exception of a few chapters that describe a single method, the problems discussed relate to every qualitative nursing project: improving the use of self-examining one's own culture, some myths and realities of qualitative sampling, debates about counting and coding data and ethical issues in interviewing.

Participatory Action Research Alice McIntyre, 2007-11-20

Participatory Action Research (PAR) introduces a method that is ideal for researchers who are committed to co-developing research programs with people rather than for people. The book provides a history of this technique, its various strands and the underlying tenets that guide most projects. It then draws on two PAR projects that highlight three integral dimensions: the meaning of participation, the way action manifests itself and the strategies for gathering, analyzing and disseminating information. Author Alice McIntyre describes the various ways in which PAR is carried out, depending on, for example, the issue under investigation, the site of the project, the project participants, people's access to resources and other related issues.

Intended Audience: This resource is an ideal supplement for graduate courses in PAR, qualitative research and various types of action-based research.

Dying: A Social Perspective on the End of Life Alex Broom, 2016-03-03

An inevitable and universal experience, dying is experienced by individuals in different ways, often related to the character of our relationships, family structures, gender identities, cultural backgrounds and economic means. Drawing on extensive qualitative fieldwork with patients, carers and health professionals in Australia and the United Kingdom, *Dying: A Social Perspective on the End of Life* provides a critical examination of the different spheres of dying in social and cultural context. Exploring complex issues such as the politics of assisted dying, negotiating medical futility, gender and dying, the desire for redemption, the moralities of the good fight and the lived experience of bodily disintegration, this book links novel theoretical ideas within sociology to cutting-edge empirical data collected in palliative and end-of-life care contexts. A theoretically engaged understanding of the social mediation of the end of life.

Dying: A Social Perspective on the End of Life also sheds light on the manner in which the end of life can be shaped by major economic, cultural and socio-cultural shifts, including neo-liberalism, individualisation, medicalisation, professionalisation and detraditionalisation. As such, it will appeal to social science, health and medical researchers interested in the end of life, as well as those working in palliative and end-of-life care settings.
