Neuropsychological Interpretation of Objective Psychological Tests Charles J. Golden, Patricia Espe-Pfeifer, Jana Wachslar-Felder, 2006-04-11 The inter comparison of specific skills as represented by performance on neuropsychological tests is at the heart of the neuropsychological assessment process However there is a tendency to regard the interpretation of single tests as a process that is independent of performance on other tests with integration of test information representing a summary of these individual test performances As neuropsychology has become increasingly sophisticated it has been recognized that many factors influence the performance on any given test The meaning of the same score may vary considerably from one person to another depending on his or her performance on other neuropsychological tests Thus a low score on the Halstead Category Test may indeed reflect frontal lobe damage but only if we first rule out the influence of visual spatial problems emotionality attentional issues motivation fatigue and comprehension of the instructions Simplistic interpretations that assume a common interpretation based on a specific score will inevitably lead to errors in interpretation and conclusions The purpose of this book is to provide each test that is described with a compendium of the possible interpretations that can be used with a variety of common tests that are often included in a neuropsychological test battery The first chapter discusses some of the pitfalls and cautions when comparing the tests while the second chapter examines administrative and scoring issues that may be unclear or unavailable for a given test

Neuropsychological Interpretation of Objective Psychological Tests Charles J. Golden, Patricia Espe-Pfeifer, Jana Wachslar-Felder, 2000-04-30 The purpose of this book is to provide a compendium of the possible interpretations that can be used with each of a variety of common tests usually included in a neuropsychological test battery The first chapter discusses some of the pitfalls and cautions when comparing tests while the second chapter examines administrative and scoring issues which may be unclear or unavailable for a given test The remainder and heart of the book is the analysis of the interpretative issues for each of the tests Each chapter is designed to present in a succinct format day to day interpretative strategies and questions for each test The organization of the text allows the user to get to the core interpretative issues quickly so that there is no need to wade through unnecessary expositions These strategies and interpretative issues will in turn generate questions for the examiner to address and can lead to the accurate analysis of each test as well as indicating the need for additional tests to be included in a given assessment Not all available neuropsychological tests have been included however these are believed to be a representative sample of the tests in use Many of the interpretative strategies cited can be used with other tests that focus on similar skills and abilities The book is intended for beginners in the field as well as individuals who have limited

experience The majority of practitioners who use neuropsychological tests only occasionally will also find the information of great use

Item Interpretation of the Luria-Nebraska Neuropsychological Battery, 1982-01-01 The Luria Nebraska Neuropsychological Battery is a relatively new neurodiagnostic test and there is a growing demand for material on the more advanced aspects of its interpretation This book organized around the theoretical meaning of items the empirical correlations between items and the factor structure of the individual scales is a first response to that demand It will serve to give greater understanding of the psychological skills that underlie each item on the Luria Nebraska battery an understanding prerequisite to the techniques of syndrome analysis described in the writings of A R Luria and it will be particularly useful to those who have limited experience with actual case material The major part of the book is an analysis of each Luria Nebraska scale either item by item or as a unit For each scale the authors examine the theoretical intent of the items and the underlying skills according to Luria s theory They then present the results of item interrelations analysis to determine whether the items tap common skills Finally they describe the factor structure of the various scales exploring the interrelations of items within each scale In addition to analyzing the behavioral scales of the Luria Nebraska battery the book reviews a number of other empirical scales that further aid interpretation particularly the experimental localization scales that tap focal deficits in specific areas of the brain Also included are case histories that illustrate the process of diagnosis in patients who receive a series of Luria Nebraska batteries over the course of their treatment Finally the authors briefly discuss subcortical disorders an issue often ignored in clinical neuropsychological testing
