2000 2nd International Conference Control of Oscillations and Chaos F. L. Chernous'ko, Aleksandr L'vovich Fradkov, 2000 2000 2nd International Conference [on] Control of Oscillations and Chaos Feliks Leonidovich Chernous'ko, Aleksandr L'vovich Fradkov, 2000 *2000 2nd International Conference Control of Oscillations and Chaos* Feliks Leonidovich Chernous'ko, Aleksandr L'vovich Fradkov, 2000 *Proceedings of the 9th International Conference on Physical and Mathematical Modelling of Earth and Environmental Processes* Vladimir Karev, 2024-06-25 This book presents short papers of participants of the 9th International Scientific Conference School for Young Scientists Physical and Mathematical Modeling of Earth and Environment Processes A special focus is given to the extraction of hydrocarbon resources including from unconventional sources An alternative to the use of hydrocarbons as a main source of energy on the Planet in the coming decades is unlikely to be found At the same time the resource base of hydrocarbons is quickly depleted in particularly large and accessible oil and gas fields The shale oil and gas Arctic hydrocarbon stocks gas hydrates coal bed methane oil and gas from deep horizons can become new sources Deep oil may be the most promising source of expanding the resource base of hydrocarbons according to many experts New technologies are required to their development Efficient low cost technologies can be created on the basis of geomechanical approach i e through the use of a huge elastic energy stored in the rock massif due to rock pressure The creation of new breakthrough approaches to the development of hydrocarbon fields is very important in today s geopolitical conditions and requires the involvement of young minds and strength International activities including the youth scientific schools can become an effective tool for exchange of information and the organizing of interdisciplinary research of processes in geo environment The book presents the new results of the experimental and theoretical modeling of deformation fracture and filtration processes in the rocks in connection to issues of creating scientific fundamentals for new hydrocarbon production technologies The investigations of the dependence of well stability and permeability of rocks on the stress strain state in conditions of deep horizons and high rock pressure are also represented **Processes in GeoMedia—Volume IX** Tatiana Chaplina, 2025-12-24 This book includes new results of theoretical and experimental studies of various scales of the processes occurring on the earth including the lithosphere atmosphere and hydrosphere Intensive development of research in these areas is due to several factors 1 the widespread introduction of computer technology allowing the calculation of complex phenomena 2 the invention and improvement of a new generation of geophysical instruments such as remote observation systems based on ships aircraft and satellites providing a large amount of data to objectively reflect a broad picture of the processes 3 the development of measurement techniques creating opportunities for controllable and reproducible laboratory data acquisition for generation of new ideas and concepts The book Enriches the understanding of the geophysical processes taking place in various environments lithosphere hydrosphere atmosphere Is devoted to the important issues that humanity is facing including the

preservation of nature and the energy provision Suggests new approaches to development of various energy sources on the planet Includes the results of theoretical and experimental studies on the development of the geomechanical approaches for hydrocarbon production Contains the results of recent research in the field of interactions of the lithosphere atmosphere and hydrosphere of various scales energy exchange of the atmosphere and the ocean including changes under anthropogenic influences Proposes new physical and mathematical models of processes occurring in the environment both natural and anthropogenic as well as elaboration of existing ones This collected research is a valuable resource for specialists working in the oil gas and engineering industry to improve their understandings of the field **Processes in GeoMedia—Volume VIII**

Sinha,2024-11-04 Economics requires understanding and analyzing forces that bring buyers and sellers to a market place who then negotiate exchanges of goods and services based on a mutually agreeable price Economists have their own method of modeling whereby models are first conceived of some notion of economic and financial thinking before being empirically tested and anomalies are then recognized if the observed data is inconsistent with the hypothetical underpinning This is in inherent contradiction with the modeling approaches of physicists who develop their theories principle and laws after observing empirical data The awareness that physics can enlighten the understanding of human behavior and thus economics and the interest of physicists in applying their training and models to understanding the complexities of finance and economics led to the creation of a new field of study appropriately termed as Econophysics Selected Topics on Econophysics is a collection of essays on topics that enhance and enrich our understanding of economic modeling when the same rigor of modelling used by physicists is brought to developing financial and economic theories These articles include discussions on modeling bitcoins stock index modeling using geometric Brownian motion agent based modeling wealth distribution modeling as well as modeling related to fractal regression and chaotic processes This interdisciplinary book will interest
