Resources,2012-04-30 From domestic to international settings aid and assistance to less developed areas has recently been bolstered by a boom in technological advances and new research Regional Development Concepts Methodologies Tools and Applications presents a vital compendium of research detailing the latest case studies architectures frameworks methodologies and research on regional development With over 100 chapters from authors from around the world this three volume collection presents the most sophisticated research and developments from the field relevant to researchers academics and practitioners alike In order to stay abreast of the latest research this book affords a vital look into regional development research      **Principles Of Airflow For Natural Ventilation; A Guide For Students Of Architecture And**

**Environmental Design** Akubue Jideofor Anselm,2025-03-26 This book is an abridged introduction to the fundamental principles of airflow in relation to natural ventilation in the designs of buildings It is a collection of the author s teaching research and practical experiences that is capable of inspiring and enlightening students The book is a timely response to the rising quest for reference materials from students in the schools of environmental studies and admirers of architecture and sustainable built environment It utilized illustrative insights into the subject as means of stimulating students and the general readership s interest towards the better comprehension of the principles importance and practicability of natural ventilation and passive cooling in buildings      **Innovation in Power, Control, and Optimization: Emerging Energy Technologies**

Vasant, Pandian,Barsoum, Nadar,Webb, Jeffrey,2011-09-30 Developing a system that can cope with variations of system or control parameters measurement uncertainty and complex multi objective optimization criteria is a frequent problem in engineering systems design The need for a priori knowledge and the inability to learn from past experience make the design of robust adaptive and stable systems a difficult task Innovation in Power Control and Optimization Emerging Energy Technologies unites research on the development of techniques and methodologies to improve the performance of power systems energy planning and environments controllers and robotics operation research and modern artificial computational intelligent techniques Containing research on power engineering control systems and methods of optimization this book is

written for professionals who want to improve their understanding of strategic developments in the area of power control and optimization

*Heating, Cooling, Lighting* Norbert M. Lechner, 2014-09-23 Sustainable environmental control through building design Heating Cooling and Lighting is the industry standard text on environmental control systems with the emphasis on sustainable design By detailing the many factors that contribute to the comfort in a building this book helps architects minimize mechanical systems and energy usage over the life of the building by siting building design and landscaping to maximize natural heating cooling and lighting This new fourth edition includes new information on integrated design strategies and designing for the Tropics Resources include helpful case studies checklists diagrams and a companion website featuring additional cases an image bank and instructor materials Designing buildings that require less energy to heat cool and light means allowing the natural energy of the sun and wind to reduce the burden on the mechanical and electrical systems Basic design decisions regarding size orientation and form have a great impact on the sustainability cost and comfort of a building Heating Cooling and Lighting provides detailed guidance for each phase of a design project Readers will Understand the concept of sustainability as applied to energy sources Review the basic principles of thermal comfort and the critical role of climate Learn the fundamentals of solar responsive design including active and passive solar systems as well as photovoltaics Discover how siting architectural design and landscaping can reduce the requirements for mechanical and electrical systems In sustainable design mechanical and electrical systems should be used to only accomplish what the architect could not by the design of the building itself With this in mind designers require a comprehensive understanding of both the properties of energy and the human factors involved in thermal comfort Heating Cooling and Lighting is the complete industry leading resource for designers interested in sustainable environmental control
