Controlling Operating Costs:

Oil and Gas Exploration and Production Denis Babusiaux, 2007 The steps that lead to the production of oil and gas are diverse complex and costly They are diverse because the detection of oil and gas involves input from many specialties ranging from geology to reservoir engineering They are complex as shown by the development of the job of the petroleum architect who coordinates all the operations They are costly as the investments for exploration and production represent more than half of all investments in the oil and gas sector Moreover exploration is a risky activity both from the technical and financial viewpoint only one well in five produces marketable oil Meanwhile the areas for exploration and production are spread throughout the world

Managing Financial Institutions: An Integrated Valuation Approach Michael Pagano, John Sedunow, 2025-06-03 This book takes a novel approach to solving a financial manager's problems by applying a valuation focus to the firm's risk management decisions Rather than concentrating solely on defining and measuring a bank's risks our book goes a step further by explicitly considering how these risks can impact the market value of the bank from a shareholder's perspective The book uses an integrated valuation framework which quantifies the costs and benefits of how a bank should manage its main risks associated with key functions such as lending investing financing and liquidity provision The book's hands-on approach to learning also incorporates useful tools for student learning such as helpful mnemonics illustrative examples and a spreadsheet which brings the concepts discussed in the book to life It is a must read for readers eager to improve their risk management skills
