Coordination Of Internet Agents Models Technologies And Applications:

Coordination of Internet Agents Andrea Omicini, Franco Zambonelli, Matthias Klusch, Robert Tolksdorf, 2013-11-27 As today's most complex computing environment the Internet confronts IT researchers system designers and application developers with completely new challenges and as a fascinating new computing paradigm agent technology has recently attracted broad interest and strong hopes for shaping the future information society Relating both the Internet and agents opens up a whole new range of advanced applications in vibrant subfields of information technology such as middleware mobile commerce e learning collaborative working and intelligent information services Many modern advanced systems are likely to exploit Internet agents and exploiting Internet agents mostly means dealing with coordination models and technologies of various sorts This monograph like anthology is the first systematic guide to models and enabling technologies for the coordination of intelligent agents on the Internet and respective applications *Declarative Agent Languages and Technologies* Joao Leite, Andrea Omicini, Leon Sterling, Paolo Torroni, 2004-07-22 Agent metaphors and technologies are increasingly adopted to harness and govern the complexity of today's systems As a consequence the growing complexity of agent systems calls for models and technologies that promote system predictability and enable feature discovery and verification Formal methods and declarative technologies have recently attracted a growing interest as a means to address such issues The aim of the DALT 2003 workshop was two fold On the one hand we wanted to foster a discussion forum to export such techniques into the broader community of agent researchers and practitioners On the other hand we wanted to bring in the issues of real world complex and possibly large scale agent system design in the perspective of formal methods and declarative technologies Thanks to the very high quality of our program committee we managed to put together a rich program including three technical sessions and two panel sessions The Use of Declarative Programming for Agent Oriented Software Engineering moderated by Leon Sterling and Andrea Omicini and Declarative and Logic Based Technology for Agent Reasoning and Interactions organized and moderated by Rafael Bordini and Wiebe van der Hoek with the participation of five invited panelists This book contains the revised and extended versions of the papers presented at the workshop as well as three invited contributions by leading researchers of the field It is composed of three parts i software engineering and multi agent system prototyping ii agent reasoning BDI logics and extensions and iii social aspects of multi agent systems *Quality Assurance of Agent-Based and Self-Managed Systems* Reiner Dumke, Steffen Mencke, Cornelius Wille, 2009-08-26 The challenges in implementing intelligent and autonomous software systems remain the development of self adapting systems self healing applications corporate global creation and collaborated robotic teams With software agent technology widely recognized as a key approach in implementing such global infrastructure the importance of the role of **International Journal of Computers & Applications** ,2003 *Languages, Methodologies, and Development Tools for Multi-Agent Systems* Mehdi Dastani, Amal El Fallah Seghrouchni, Joao Leite, Paolo Torroni, 2010-06-09 This book contains the proceedings of the Second

International Workshop on Languages Methodologies and Development Tools for Multi agent Systems LADS 2009 which took place during September 7-9 2009 in Turin Italy As in its 2007 edition this workshop was a part of MALLOW a federation of workshops on Multi Agent Logics Languages and Organizations The LADS 2009 workshop addressed both theoretical and practical issues related to developing and deploying multi agent systems It constituted a rich forum where leading researchers from both academia and industry could share their experiences on formal approaches programming languages methodologies tools and techniques supporting the development and deployment of multi agent systems From a theoretical point of view LADS 2009 aimed at addressing issues related to theories methodologies models and approaches that are needed to facilitate the development of multi agent systems ensuring their predictability and verification Formal declarative models and approaches have the potential of offering solutions for the specification and design of multi agent systems From a practical point of view LADS 2009 aimed at stimulating research and discussion on how multi agent system specifications and designs can be effectively implemented and tested This book is the result of a strict selection and review process From 14 papers originally submitted to LADS 2009 and after 2 rounds of reviews we selected 10 high quality papers covering important topics related to multi agent programming technology such as agent architectures programming languages and methodologies social interaction models development tools and applications of multi agent systems

Environments for Multi-Agent Systems Danny Weyns, H. Van Dyke Parunak, Fabien Michel, 2005-02-18 The modern field of multiagent systems has developed from two main lines of earlier research Its practitioners generally regard it as a form of artificial intelligence AI Some of its earliest work was reported in a series of workshops in the US dating from 1980 revealingly entitled Distributed Artificial Intelligence and pioneers often quoted a statement attributed to Nils Nilsson that all AI is distributed The locus of classical AI was what happens in the head of a single agent and much MAS research reflects this heritage with its emphasis on detailed modeling of the mental state and processes of individual agents From this perspective intelligence is ultimately the purview of a single mind though it can be amplified by appropriate interactions with other minds These interactions are typically mediated by structured protocols of various sorts modeled on human conventional behavior But the modern field of MAS was not born of a single parent A few researchers have persistently advocated ideas from the field of artificial life A-Life These scientists were impressed by the complex adaptive behaviors of communities of animals often extremely simple animals such as insects or even microorganisms The computational models on which they drew were often created by biologists who used them not to solve practical engineering problems but to test their hypotheses about the mechanisms used by natural systems In the artificial life model intelligence need not reside in a single agent but emerges at the level of the community from the nonlinear interactions among agents cause the individual agents are often subcognitive their interactions cannot be modeled by protocols that presume linguistic competence

Cooperative Information Agents VII Matthias Klusch, Sascha Ossowski, Andrea Omicini, Heimo Laamanen, 2003-08-14 These are the proceedings of the 7th

International Workshop on Cooperative Information Agents CIA 2003 held at the Sonera Conference Center in Helsinki Finland August 27-29 2003 It was co-located with the 4th Agentcities Information Days One key challenge of developing advanced agent-based information systems is to balance the autonomy of networked data and knowledge sources with the potential payoff of leveraging them by the appropriate use of intelligent information agents on the Internet An information agent is a computational software entity that has access to one or multiple heterogeneous and distributed data and information sources proactively searches for and maintains relevant information on behalf of its human users or other agents preferably just in time In other words it is managing and overcoming the difficulties associated with information overload in the open and exponentially growing Internet and Web Depending on the application and tasks at hand information agents may collaborate in open networked data and information environments to provide added value to a variety of applications in different domains Thus research and development of information agents is inherently interdisciplinary It requires expertise in information retrieval artificial intelligence database systems human computer interaction and Internet and Web technology Initiated in 1997 the purpose of the annual international workshop series on cooperative information agents CIA is to provide an interdisciplinary forum for researchers software developers and managers to get informed about present and discuss the latest high quality results in advancements of theory and practice in information agent technology for the Internet and Web Each event of this renowned series attempts to capture the intrinsic interdisciplinary nature of this research area by calling for contributions from different research communities and by promoting open and informative discussions on all related topics Coordination Languages and Models ,2004 周志英 Zhiying Zhou, Scott Tilley, 2005

Internet-Based Workflow Management Dan C. Marinescu, 2002-04-24 Internet-based business transactions can be broken down into a series of independent steps This workflow often involves tools from an array of fields such as network modeling scheduling distributed systems artificial intelligence software agents and Java This book serves as a single comprehensive resource for IT practitioners and students that covers all these vital aspects of workflow management
