Control of Messenger RNA Stability Joel G. Belasco, George Brawerman, 2012-12-02 This is the first comprehensive review of mRNA stability and its implications for regulation of gene expression Written by experts in the field Control of Messenger RNA Stability serves both as a reference for specialists in regulation of mRNA stability and as a general introduction for a broader community of scientists Provides perspectives from both prokaryotic and eukaryotic systems Offers a timely comprehensive review of mRNA degradation its regulation and its significance in the control of gene expression Discusses the mechanisms RNA structural determinants and cellular factors that control mRNA degradation Evaluates experimental procedures for studying mRNA degradation **Control of Messenger RNA Stability in** Saccharomyces Cerevisiae Sean Wilson, 2001 The Control of MRNA Turnover as a Mechanism of Glucose Repression in Saccharomyces Cerevisiae Geoffrey P. L. Cereghino, 1995 Cytoplasmic fate of messenger RNA Philippe Jeanteur, 2012-12-06 Among all cellular RNA species of the three main types ribosomal RNA transfer RNA or messenger RNA be they from prokaryotic or eukaryotic organisms the prokaryotic mRNA is unique in that it has no precursor and is synthesized in the same mature form as it is translated into proteins In fact ribosomes join the nascent mRNA chain and engage in protein synthesis long before its transcription is complete Provisions are even made for slowing down the ribo somes at some sites to prevent them from catching up with the RNA polymerase Of course such a situation is only possible in the prokaryotic world where there is no such thing as a nuclear mem brane physically secluding the transcription process from the cy toplasm where translation is restricted Quite in the opposite extreme the eukaryotic pre messenger RNA has to suffer many and sometimes drastic steps of maturation capping polyadenylation splicing edition before the decision is made to export it to the cytoplasm That is where it enters the scope of this book Once in the cytoplasm many options are still open to it its entrance into polysomes may be delayed as it is in unfertilized eggs or merely prohibited ferritin mRNA in iron starved cells directed to specific locations within the cytoplasm or be more or less rapidly degraded During gametogenesis and early development translational control is probably the most significant level of gene expression **Regulation of** Mammalian Messenger RNA Stability Via the Open Reading Frame Megan E. Forrest, 2020 The role of mRNA decay in dynamic control of gene expression has long been appreciated where changes in mRNA stability in response to various cellular conditions can have widespread effects on steady state mRNA levels While mRNA stability is controlled in part by ribonucleoprotein composition the primary codon sequence within the open reading frame has increasingly been recognized as an important determinant of stability in eukaryotes particularly with regard to differential utilization and incorporation of codons by the translation machinery The data presented in this dissertation expand upon previous studies linking differences in codon composition in the mRNA open reading frame to effects on translation and stability in budding yeast S cerevisiae The principle aim of this research was to characterize the effects of open reading frame sequence on mRNA decay rates in

mammalian cells Using a combination of single gene mRNA reporters and transcriptome wide half life determinations by metabolic labeling in human HeLa and Chinese hamster ovary cells we determined that both synonymous codon content and encoded amino acid sequence are determinants of mRNA stability in mammalian cells in contrast to previous studies in other model organisms Further the relative codon specific stabilities observed in HeLa were found to be associated with both cognate tRNA availability and intracellular amino acid levels using empirical measurements of tRNA and amino acid levels Accordingly codon and amino acid content were found to contribute significantly to the observed variation in half lives for endogenous mRNAs within functionally related gene groups Further both codon and amino acid based effects on stability were found to vary among different organisms supporting the idea that open reading frame based effects on stability differ throughout evolution The novel finding that amino acid content within a given mRNA transcript contributes to its stability raises the possibility of control of gene expression regulation in response to changes in metabolic status which can be applied towards a better understanding of various disease mechanisms Collectively these results also have implications for improving our understanding of general mRNA decay mechanisms in mammals highlighting important potential differences between yeast and higher eukaryotes at the level of mRNA sequence decoding that merit further exploration **Methods Manual: Expression of recombinant proteins** Ivan Lefkovits, 1997 Medical Cell Biology Steven R.
