Signal Processing Louis Auslander, F. Alberto Grünbaum, T. Kailath, J. William Helton, S. Mitter, Pramod P. Khargonekar, 1990-04-23

The two volumes of Signal Processing are based on lectures delivered during a six week program held at the IMA from June 27 to August 5 1988 The first two weeks of the program dealt with general areas and methods of Signal Processing The problem areas included imaging and analysis of recognition x ray crystallography radar and sonar signal analysis and 1 D signal processing speech vision and VLSI implementation The methods discussed included harmonic analysis and wavelets operator theory algorithm complexity filtering and estimation and inverse scattering The topics of weeks three and four were digital filter VLSI implementation and integrable circuit modelling In week five the concentration was on robust and nonlinear control with aerospace applications and in week six the emphasis was on problems in radar sonar and medical imaging Because of the large overlap between the various one week and two week segments of the program we found it more convenient to divide the material somewhat differently Part I deals with general signal process theory and Part II deals with i application of signal processing ii control theory related themes We are grateful to the scientific organizers Tom Kailath Chairman Louis Auslander F Alberto Grunbaum J William Helton Pramod P Khargonekar and Sanjoy K Mitter We are also grateful for the generous support given to the IMA program by the Office of Naval Research the Air Force Office of Scientific Research the Army Research Office and the National Security Agency

Adaptive Dual Control Nikolai Michailovich Filatov, Heinz Unbehauen, 2004-04-20 This monograph demonstrates how the performance of various well known adaptive controllers can be improved significantly using the dual effect The modifications to incorporate dual control are realized separately and independently of the main adaptive controller without complicating the algorithms A new bicriterial approach for dual control is developed and applied to various types of popular linear and nonlinear adaptive controllers Practical applications of the designed controllers to several real time problems are presented This monograph is the first book providing a complete exposition on the dual control problem from the inception in the early 1960s to the present state of the art aiming at students and researchers in adaptive control as well as design engineers in industry
