## **Controlling Life Jacques Loeb And The Engineering Ideal In Biology:**

**Controlling Life** Philip J. Pauly, 1987 The biologist Jacques Loeb 1859 1924 helped to shape the practice of modern biological research through his radical emphasis on reductionist experimentation This biography traces his career and convincingly argues that Loeb's desire to control organisms manifested in studies of both reproduction and animal behavior contributed to a new self image for biologists The author places Loeb's experiments and the controversies they generated in their intellectual and institutional contexts tracing his influence on the development of behaviorism genetics and reproductive biology Biotechnology and Society Hallam Stevens, 2016-10-06 With Biotechnology and Society Hallam Stevens offers an up to date primer to help us understand the interactions of biotechnology and society and the debates controversies fears and hopes that have shaped how we think about bodies organisms and life in the twenty first century Stevens addresses such topics as genetically modified foods cloning and stem cells genetic testing and the potential for discrimination fears of and in some cases hopes for designer babies personal genomics biosecurity and biotech art Taken as a whole the book presents a clear authoritative picture of the relationship between biotechnology and society today and how our conceptions and misconceptions of it could shape future developments It is an essential volume for students and scholars working with biotechnology while still being accessible to the general reader interested in the truth behind breathless media accounts about biotech's promise and perils Physiology in the American Context, 1850-1940 Gerald L.

Geisson, 2013-05-27 A study of physiology in America this places the development of American physiology in the cultural context of the period Divided into three parts the book covers social and institutional history physiology in relation to other fields and instruments materials and techniques *Ghosts of Transparency* Michael R. Doyle, Selena Savić, Vera Bühlmann, 2019-09-23 In this book the editors focus on architecture and communication from various different perspectives taking into account that the term architecture is used for buildings as well as in the context of computer software Data and software also impact on our cities raw data however do not convey any information in order to generate information and communication they have to be organized and must make sense to the reader The contributions avoid clear separation of the various communication spheres of their disciplines Instead they use the wide range of approaches to explore meanings an ambitious aim that leaves the destination wide open the reader is invited to share in this adventure **Synthetic**

**Aesthetics** Alexandra Daisy Ginsberg, Jane Calvert, Pablo Schyfter, Alistair Elfick, Drew Endy, 2017-01-06 As synthetic biology transforms living matter into a medium for making what is the role of design and its associated values Synthetic biology manipulates the stuff of life For synthetic biologists living matter is programmable material In search of carbon neutral fuels sustainable manufacturing techniques and innovative drugs these researchers aim to redesign existing organisms and even construct completely novel biological entities Some synthetic biologists see themselves as designers inventing new products and applications But if biology is viewed as a malleable engineerable designable medium what is the role of design and how

will its values apply In this book synthetic biologists artists designers and social scientists investigate synthetic biology and design After chapters that introduce the science and set the terms of the discussion the book follows six boundary crossing collaborations between artists and designers and synthetic biologists from around the world helping us understand what it might mean to design nature These collaborations have resulted in biological computers that calculate form speculative packaging that builds its own contents algae that feeds on circuit boards and a sampling of human cheeses They raise intriguing questions about the scientific process the delegation of creativity our relationship to designed matter and the importance of critical engagement Should these projects be considered art design synthetic biology or something else altogether Synthetic biology is driven by its potential some of these projects are fictions beyond the current capabilities of the technology Yet even as fictions they help illuminate question and even shape the future of the field **What Is**

**Regeneration?** Jane Maienschein, Kate MacCord, 2022-04-06 Two historians and philosophers of science offer an essential primer on the meaning and limits of regeneration In punishment for his stealing fire the Greek gods chained Prometheus to a rock where every day an eagle plucked out his liver and every night the liver regenerated While Prometheus may be a figure of myth scholars today ask whether ancient Greeks knew that the human liver does in fact have a special capacity to regenerate Some organs and tissues can regenerate while others cannot and some organisms can regenerate more fully and more easily than others Cut an earthworm in half and two wiggly worms may confront you Cut off the head of a hydra and it may grow a new head Cut off a human arm and the human will be missing an arm Why the differences What are the limits of regeneration and how when and why does it occur In this book historians and philosophers of science Jane Maienschein and Kate MacCord explore biological regeneration delving into a topic of increasing interest in light of regenerative medicine new tools in developmental and neurobiology and the urgent need to understand and repair damage to ecosystems brought on by climate change Looking across scales from germ nerve and stem cells to individual organisms and complex systems this short and accessible introduction poses a range of deep and provocative questions What conditions allow some damaged microbiomes to regenerate where others do not Why are forests following a fire said to regenerate sometimes but not always And in the face of climate change in the era called the Anthropocene can the planet regenerate to become healthy again or will the global ecosystem collapse Tissues, Cultures, Art Ionat Zurr, Oron Catts, 2023-03-29 Tissues Cultures Art narrates the twenty five years of collaborative and sometimes provocative artistic practice and scholarly thought of Catts Zurr who pioneered the use of regenerative biology techniques to create Semi Living art using living cells tissues and technological surrogate bodies Through hands on work in biological laboratories the authors researched concepts such as partial life and DNA Chauvinism and explored the fantasies of living in a technologically mediated victimless utopia The authors delve into life s resistance to reductionism systemisation and control asking whether there is something unique to life without the need to resort to metaphysics Their practices reach beyond the confines of art and are often cited as precursors to the cellular

agriculture and biofabrication industries Through a hybrid of personal reflections poetics and anecdotes with a more rigorous scholarly approach all illustrated with artworks the authors present a critical view on the use of life as a raw material for human manipulation

**America's Ocean Wilderness** Gary Kroll, 2008 Examines a handful of famous ocean explorers and naturalists including Jacques Cousteau Thor Heyerdahl and Rachel Carson among others to demonstrate how their work helped shape the way many Americans would think about and interact with the ocean

**B.F. Skinner and Behaviorism in American Culture** Laurence D. Smith, William Ray Woodward, 1996 From a base of research on laboratory animals in the 1930s Skinner built a committed and influential following as well as a utopian movement for social reform His radical ideas attracted much public attention and generated heated controversy By the mid 1970s he had become the most widely recognized scientist in America surpassing even Margaret Mead and Linus Pauling

**A History of Psychology** Ludy T. Benjamin, 1997 This book is a reader in the history of psychology that covers the field from Descartes and Locke and the rise of modern science through the neobehaviorism of the 1950 s It is unlike any previous reader treating the history of psychology in that it combines primary and secondary sources The history of psychology course is offered in the psychology department at most four year schools

**Theories of Science in Society** Susan E. Cozzens, 1990 Sociologists of science have over the past three decades or so learned a great deal about the social organization of scientific communities and about the social construction of scientific knowledge But progress has been relatively modest toward understanding the reciprocal relationships between science and its social political economic organizational and cultural settings How should we think about the place of science in modern societies The essays in this volume present new approaches to this question

**MBL Science**, 1988 **The Vital Machine** David F. Channell, 1991 In 1738 Jacques Vaucanson unveiled his masterpiece before the court of Louis XV a gilded copper duck that ate drank quacked flapped its wings splashed about and most astonishing of all digested its food and excreted the remains The imitation of life by technology fascinated Vaucanson's contemporaries Today our technology is more powerful but our fascination is tempered with apprehension Artificial intelligence and genetic engineering to name just two areas raise profoundly disturbing ethical issues that undermine our most fundamental beliefs about what it means to be human In *The Vital Machine* David Channell examines the history of our relationship with technology and argues that while the resolution

of these issues may not be imminent a philosophical framework for dealing with them is already in place The source of our fears he suggests lies in an outmoded distinction between organic life and machines a distinction rooted in the two world views that have defined and guided Western civilization the mechanical and the organic The mechanical view holds that the universe is basically a machine we can understand it by breaking it down into its smallest components Even organisms are machines The organic view claims that there is something more some vital directive force The whole is more than just the sum of its parts Even machines are organisms Channell presents these polar views in a fascinating chronicle of human thought and achievement ranging over the discoveries of Galileo Copernicus Newton and Einstein the philosophies of Plato Descartes Kant and Marx the fields of alchemy physics astrology and biology We see not only how the two views progressed independently but also how they influenced each other not only how they persisted but also how they changed Most fascinating of all we follow the emergence of a third all embracing world view as developments in genetics relativity quantum mechanics and computer intelligence force both science and philosophy to come to a more complex understanding of the universe As a central metaphor for this third view Channell proposes the vital machine And in this stimulating work by the same name he reveals how this new metaphor may provide us with the philosophical understanding we need to address the ethical issues our science has created

*Modern Perspectives on John B. Watson and Classical Behaviorism* James T. Todd, Edward K. Morris, 1994 This volume reassesses the role of classical behaviourism in 20th century psychology providing modern perspectives that correct the standard views of John B Watson This historical analysis includes comprehensive bibliographies of Watson s published works and important related studies
