Controlling The Greenhouse Effect Five Global Regimes Compared:

Controlling the Greenhouse Effect Joshua M. Epstein, Raj Gupta, 2010-12-01 Roughly 30 percent of the solar radiation directed toward the earth is reflected directly back into outer space The remaining 70 percent is absorbed by earth and re emitted outward as long wave or infra red radiation While transparent to incoming solar radiation certain gases notably carbon dioxide nitrous oxide methane and chlorofluorocarbons absorb or trap this outgoing infra red radiation near the earth's surface producing an increase in temperature This is the so called greenhouse effect The greater the concentration of these greenhouse gases the more pronounced will be the effect Despite uncertainties the scientific consensus recorded at Villach Austria in 1985 was that the understanding of the greenhouse question is sufficiently developed that scientists and policy makers should begin an active collaboration to explore the effectiveness of alternatives and adjustments The recent scientific assessment of climate change conducted under the auspices of the UN Intergovernmental Panel on Climate Change has only strengthened the view that a concerted multilateral response is called for [The Challenge of Globalization for Germany's Social Democracy](#) Dieter Dettke, 1998-12-01

Modell Deutschland once admired worldwide has lost much of its shine due to a number of internal and external factors This important and timely volume deals with the economic and political pressures and challenges of globalization and is particularly concerned with their effect on social policy labor markets environmental policies and technological change Distinguished academic experts and leading politicians discuss these problems both from an international perspective and against the background of debates currently going on in Germany **Taxing Choices for**

Managing Natural Resources, the Environment, and Global Climate Change Anwar Shah, 2023-02-21 This book reviews taxing choices to protect the local and global environment and preserve and sustain natural resources Alternative economic instruments such as carbon taxes and tradable permits to combat global climate change are also examined Strategies and practices for the managing and sharing of revenues from natural resources are highlighted Also roles of various orders of government in managing taxing and sharing natural resources in selected countries are documented to highlight the impact of such division of responsibilities in preserving natural resources and the environment The susceptibility of resource revenue dependent economies to corruption and malfeasance and the Dutch disease is also highlighted This book could serve as a supplementary reference book for graduate and undergraduate courses and as a sourcebook for journalists researchers policymakers and government practitioners **Economic Policies for Sustainable**

Development Thomas Sterner, 2012-12-06 This book focuses on describing policy instruments in different countries Its purpose is not only descriptive but also to some extent advocacy We believe that economic instruments can make an important contribution to an environmentally less disruptive path of development The design of economic instruments is however a fine art and depends among other things on their political acceptability and this acceptability is of course influenced by experience It is therefore important to provide information on the use of policy instruments in other countries

Policies are currently developing quite fast and thus a book such as this one can inevitably not capture more than a snapshot view at a single moment of time We would hope that the book encourages more experimentation with economic instruments and that countries will make a fuller use of the whole arsenal of economic policy instruments If the book does succeed in this sense then it will soon become dated as policies change but that would be a price well worth paying The book combines a dozen country monographs together with a few international surveys on particular topics gasoline pricing vehicle regulations acid rain deforestation and global warming These papers are intended to illustrate the diversity of policy options available The actual policies adopted depend on economic as well as ecological conditions The country studies cover two Western countries and then concentrate on formerly planned and developing countries They show that economic instruments are still generally thought of as new and innovative

Pricing the Planet Peter Herman May, Peter May, Ronaldo Serôa da Motta, 2000-08-15 An outgrowth of the 1992 Symposium and Exhibit of Environmental Technologies ECOTECH held in Rio de Janeiro as part of the UN Conference on Environment and Development UNCED this book addresses our ecological future and explores alternatives to mainstream solutions

Climate Change 1995: Economic and Social Dimensions of Climate Change Hoesung Yi, Intergovernmental Panel on Climate Change. Working Group III., 1996-06-27 The consequences of climate change for society are analysed in this landmark assessment from the IPCC This book assesses the available knowledge on the many issues that society has to face including the international decision making framework applicability to climate change of techniques for assessing costs and benefits the significant social costs of projected climate change and the economic assessment of policy instruments to combat climate change nationally and internationally Some important conclusions of this Second Assessment Report indicate that 10 to 30% of greenhouse gas emissions in most countries can be reduced at negative or zero cost no regrets measures Also the literature indicates that climate change will cause aggregate net damage which provides an economic rationale for going beyond no regrets measures It also indicates that a portfolio of mitigation adaptation and research measures is a sound strategy for addressing climate change given the remaining uncertainties This report speaks directly to the issues that are faced by the many countries committed to limit emissions of greenhouse gases by the year 2000 and currently negotiating actions to be taken beyond that date Will be of great value to the international community of policymakers interested in the consequences of climate change as well as to economists social and natural scientists

Fair Weather Ferenc L. Tóth, 2013-11-05 How should responsibility for adapting to climate change be distributed Who should bear the costs of mitigating its impacts and how should these costs be measured Answers to these questions differ often according to the vulnerability wealth and level of industrial development of the country Finding a fair solution is controversial but crucial to the complex and vital negotiations over global warming This volume examines equity concerns in climate change from a broad range of social science disciplines It explores the policy dimensions and analytical needs of the negotiations process
