Conversations On Mind Matter And Mathematics:

Conversations on Mind, Matter, and Mathematics Jean-Pierre Changeux, 1995 *Conversations on Mind, Matter, and Mathematics* Jean-Pierre Changeux, Alain Connes, 1998-12-27 Do numbers and the other objects of mathematics enjoy a timeless existence independent of human minds or are they the products of cerebral invention Do we discover them as Plato supposed and many others have believed since or do we construct them Does mathematics constitute a universal language that in principle would permit human beings to communicate with extraterrestrial civilizations elsewhere in the universe or is it merely an earthly language that owes its accidental existence to the peculiar evolution of neuronal networks in our brains Does the physical world actually obey mathematical laws or does it seem to conform to them simply because physicists have increasingly been able to make mathematical sense of it Jean Pierre Changeux an internationally renowned neurobiologist and Alain Connes one of the most eminent living mathematicians find themselves deeply divided by these questions The problematic status of mathematical objects leads Changeux and Connes to the organization and function of the brain the ways in which its embryonic and post natal development influences the unfolding of mathematical reasoning and other kinds of thinking and whether human intelligence can be simulated modeled or actually reproduced by mechanical means The two men go on to pose ethical questions inquiring into the natural foundations of morality and the possibility that it may have a neural basis underlying its social manifestations This vivid record of profound disagreement and at the same time sincere search for mutual understanding follows in the tradition of Poincaré Hadamard and von Neumann in probing the limits of human experience and intellectual possibility Why order should exist in the world at all and why it should be comprehensible to human beings is the question that lies at the heart of these remarkable dialogues **Before Tomorrow** Catherine Malabou, 2016-09-06 Is contemporary continental philosophy making a break with Kant The structures of knowledge taken for granted since Kant's Critique of Pure Reason are now being called into question the finitude of the subject the phenomenal given a priori synthesis Relinquish the transcendental such is the imperative of postcritical thinking in the 21st century Questions that we no longer thought it possible to ask now reemerge with renewed vigor can Kant really maintain the difference between a priori and innate Can he deduce rather than impose the categories or justify the necessity of nature Recent research into brain development aggravates these suspicions which measure transcendental idealism against the thesis of a biological origin for cognitive processes In her important new book Catherine Malabou lays out Kant's response to his posterity True to its subject the book evolves as an epigenesis the differentiated growth of the embryo for as those who know how to read critical philosophy affirm this is the very life of the transcendental and contains the promise of its transformation *Mathematics and the Aesthetic* Nathalie Sinclair, William Higginson, 2007-12-28 A majority of the chapters in this book first saw the light of day as talks at a conference organised and held at Queen's University in Kingston Ontario Canada in April 2001 This small invitational meeting tellingly entitled Beauty and the Mathematical Beast brought together a

range of academics interested in and committed to exploring connections between mathematics and aesthetics. The enthusiastic response of participants at this gathering encouraged the presenters to expand upon their initial contributions and persuaded the organisers to recruit further chapters in order to bring a greater balance to the whole. The timing of this event was not arbitrary. The preceding decade had seen a resurgence in serious writing dealing with deeper relations between mathematics and science and the beautiful. In many ways we, the editors of this volume, found these contributions to the literature were revisiting and drawing on themes that had been prominent over two thousand five hundred years ago in certain writings of the Pythagoreans. While not intending to offer a historical reappraisal of these ancient thinkers here we have none the less chosen to invoke this profound interweaving of the mathematical and the aesthetic to which this reputedly secretive philosophical sect was extensively attuned. This book is divided into three sections comprising three chapters each each with its own short introduction discussing the particular chapters within.

From Strange Simplicity to Complex Familiarity Manfred Eigen, 2013-05-23. This book presents a vivid argument for the almost lost idea of a unity of all natural sciences. It starts with the strange physics of matter including particle physics, atomic physics and quantum mechanics, cosmology, relativity and their consequences. Chapter I and it continues by describing the properties of material systems that are best understood by statistical and phase space concepts. Chapter II. These lead to entropy and to the classical picture of quantitative information initially devoid of value and meaning. Chapter III. Finally information space and dynamics within it are introduced as a basis for semantics. Chapter IV leading to an exploration of life and thought as new problems in physics. Chapter V. Dynamic equations again of a strange but very general nature bring about the complex familiarity of the world we live in. Surprising new results in the life sciences open our eyes to the richness of physical thought and they show us what can and what cannot be explained by a Darwinian approach. The abstract physical approach is applicable to the origins of life of meaningful information and even of our universe.
