Convolution Operators And Factorization Of Almost Periodic Matrix Functions:

Convolution Operators and Factorization of Almost Periodic Matrix Functions Albrecht Böttcher, Yuri I.

Karlovich, Ilya M. Spitkovsky, 2012-12-06 Many problems of the engineering sciences physics and mathematics lead to convolution equations and their various modifications Convolution equations on a half line can be studied by having recourse to the methods and results of the theory of Toeplitz and Wiener Hopf operators Convolutions by integrable kernels have continuous symbols and the Cauchy singular integral operator is the most prominent example of a convolution operator with a piecewise continuous symbol The Fredholm theory of Toeplitz and Wiener Hopf operators with continuous and piecewise continuous matrix symbols is well presented in a series of classical and recent monographs Symbols beyond piecewise continuous symbols have discontinuities of oscillating type Such symbols emerge very naturally For example difference operators are nothing but convolution operators with almost periodic symbols the operator defined by A

Harmonic Analysis and Operator Theory Stefania A. M. Marcantognini, 1995 The collection covers a broad spectrum of topics including wavelet analysis Haenkel operators multimeasure theory the boundary behavior of the Bergman kernel interpolation theory and Cotlar's Lemma on almost orthogonality in the context of L^p spaces and more

Operator Theory, Operator Algebras, and Applications Deguang Han, Palle E. T. Jørgensen, David R. Larson, 2006

This book offers a presentation of some new trends in operator theory and operator algebras with a view to their applications It consists of separate papers written by some of the leading practitioners in the field The content is put together by the three editors in a way that should help students and working mathematicians in other parts of the mathematical sciences gain insight into an important part of modern mathematics and its applications While different specialist authors are outlining new results in this book the presentations have been made user friendly with the aid of tutorial material In fact each paper contains three things a friendly introduction with motivation tutorial material and new research The authors have strived to make their results relevant to the rest of mathematics A list of topics discussed in the book includes wavelets frames and their applications quantum dynamics multivariable operator theory C algebras and von Neumann algebras Some longer papers present recent advances on particular long standing problems such as extensions and dilations the Kadison Singer conjecture and diagonals of self adjoint operators
