**Organisation of Tomorrow** Mark Van Rijmenam, 2019-07-19 The Organisation of Tomorrow presents a new model of doing business and explains how big data analytics, blockchain and artificial intelligence force us to rethink existing business models and develop organisations that will be ready for human machine interactions. It also asks us to consider the impacts of these emerging information technologies on people and society. Big data analytics empowers consumers and employees. This can result in an open strategy and a better understanding of the changing environment. Blockchain enables peer to peer collaboration and trustless interactions governed by cryptography and smart contracts. Meanwhile, artificial intelligence allows for new and different levels of intensity and involvement among human and artificial actors. With that, new modes of organising are emerging where technology facilitates collaboration between stakeholders and where human to human interactions are increasingly replaced with human to machine and even machine to machine interactions. This book offers dozens of examples of industry leaders such as Walmart, Telstra, Alibaba, Microsoft and T-Mobile, before presenting the D2 A2 model, a new model to help organisations datafy their business, distribute their data, analyse it for insights and automate processes and customer touchpoints to be ready for the data driven and exponentially changing society that is upon us. This book offers governments, professional services, manufacturing, finance, retail and other industries a clear approach for how to develop products and services that are ready for the twenty first century. It is a must read for every organisation that wants to remain competitive in our fast changing world. Artificial Intelligence and Bioethics Perihan Elif Ekmekci, Berna Arda, 2020-07-30 This book explores major bioethical issues emerging from the development and use of artificial intelligence in medical settings. The book discusses bioethical inquiries in two

separate sets The first set is comprised of ontological discussions mainly focusing on personhood and being an ethical agent of an artefact The second set discusses bioethical issues resulting from the use of artificial intelligence It focuses particularly on the area of artificial intelligence use in medicine and health services It addresses the main challenges by considering fundamental principles of medical ethics including confidentiality privacy compassion veracity and fidelity Finally the authors discuss the ethical implications of involvement of artificial intelligence agents in patient care by expanding on communication skills in a case based approach The book is of great interest to ethicists medical professionals academicians engineers and scientists working with artificial intelligence
