Deep Fakes, Fake News, and Misinformation in Online Teaching and Learning Technologies Blankenship, Rebecca J., 2021-06-25 Choosing the right technologies to match student learning outcomes in today's technology integrated classrooms presents educators and instructional designers with multiple curricula and instructional design challenges including selecting appropriate technologies to match desired student learning outcomes As students continue to have broad access to information from a variety of web based platforms

educators and educational professionals are increasingly tasked with ensuring the information used to complete key assignments or tasks is authentic and from a verifiable resource. As such, the era of deep fakes in images, audios, videos, and digital texts is more prevalent than ever, as numerous programs using artificial intelligence (AI) can significantly alter original content to fundamentally change the intent of original content. Moreover, students are being bombarded by a plethora of information that is either intentionally or mistakenly false and must be navigated with care. Accordingly, educators and educational professionals are now tasked with employing best practices to not only teach basic digital literacy and citizenship skills but also to recognize how technology-immersed learning environments interact with deep fakes and misinformation while equipping students with the tools necessary to recognize authentic and altered content.

Deep Fakes, Fake News, and Misinformation in Online Teaching and Learning Technologies is a critical reference source that addresses rising concerns of students' ability to navigate the multitude of false and altered information and content that is easily accessible through online platforms. The chapters go into deeper detail about how deep fakes, fake news, and mis- and disinformation have the potential of negatively affecting the fields of teaching and learning and the importance of student access to content-related tasks from legitimate, vetted resources that accurately reflect the desired information the student means to convey. The book seeks to reinforce the importance of digital literacy and digital citizenship among adolescents. This book is essential for teaching faculty, higher education faculty, higher education administrators, educational software developers, security specialists, information specialists, media specialists, librarians, educational researchers, and students looking for information on how deep fakes and fake news are being navigated within the context of online teaching and educational technologies. **PC Mag**, 2007-02-06. Technology in Classrooms Harrison Stewart, AI, 2025-03-11. *Technology in Classrooms* explores the transformative impact of digital tools on education, examining how technology integration is reshaping teaching and learning. The book traces the evolution of educational technology, highlighting how personalized learning experiences and the growing emphasis on digital literacy are driving advancements. It argues that thoughtfully implemented technology can enhance education, making it more engaging and accessible. The book begins by introducing fundamental concepts like learning management systems and interactive whiteboards. It progresses to explore technology's impact on personalized and collaborative learning, using case studies to illustrate real-world applications. The text emphasizes aligning technology with sound pedagogical principles, encouraging educators to critically evaluate its potential benefits and drawbacks. Concluding with a discussion of emerging trends such as artificial intelligence and virtual reality, the book offers practical recommendations for educators and policymakers. It draws from academic research, case studies, and surveys, providing a balanced perspective on the role of technology in K-12 education.
