Conservation Of Wildlife By Sustainable Use:

Wildlife Conservation by Sustainable Use H.H.T Prins, Jan Geu Grootenhuis, Thomas T. Dolan, 2012-12-06 One of the major challenges of sustainable development is the interdisciplinary nature of the issues involved To this end a team of conservation biologists hunters tourist operators ranchers wildlife and land managers ecologists veterinarians and economists was convened to discuss whether wildlife outside protected areas in Africa can be conserved in the face of agricultural expansion and human population growth They reached the unequivocal if controversial conclusion that wildlife can be an economic asset especially in the African savannas if this wildlife can be sustainably utilized through safari hunting and tourism Using the African savannas as an example *Wildlife Conservation by Sustainable Use* shows that in many instances sustainable wildlife utilization comprises an even better form of land use than livestock keeping Even when population pressure is high as in agricultural areas or in humid zones and wild animal species can pose a serious cost to agriculture these costs are mainly caused by small species with a low potential for safari hunting Although ranching has a very low rate of return and is hardly ever profitable the biggest obstacle to the model of sustainable wildlife use outlined in *Wildlife Conservation by Sustainable Use* is from unfair competition from the agricultural sector such as subsidies and lack of taxation resulting in market distortion for wildlife utilization This book thus gives valuable evidence for a different way of working providing arguments for removing such distortions and thereby facilitating financially sound land use and making it a rationally sound choice to conserve wildlife outside protected areas The expert team of authors most of whom came together at a workshop to thrash out the ideas that were then developed into the various chapters has written a superb account of recent research on this complex subject resulting in a book that is a major contribution to our understanding of sustainable use of land The important conclusion is that wildlife conservation can be possible for landholders and local communities if they have a financial interest in protecting wildlife on their lands

Animals in Peril John Arthur Hoyt, 1994 Argues that the theory that endangered species must pay their own way to survive is a political expediency used to justify legalized killing in the name of conservation

Conservation and Sustainable Use E.J. Milner-Gulland, J. Marcus Rowcliffe, 2007-11-15 A practical and integrated approach to carrying out research on the conservation status of exploited species from data collection to long term management Wildlife conservation and sustainable use have recently become centrepieces in conservation and development research

Evolution and Innovation in Wildlife Conservation Helen Suich, Brian Child, 2012-05-04 The crucible of innovation in wildlife and habitat conservation is in southern Africa where it has co evolved with decolonization political transformation and the rise of development ownership management and livelihood debates Charting this innovation early chapters deal with the traditional fines and fences conservation that occurred in the colonial and early post independence period with subsequent sections focussing on the experimentation and innovation that occurred on private and communal land as a result of the break from these traditional methods The final section deals with

more recent innovations in the sector focussing on building and strengthening the relationships between parks and society. Importantly the book provides a data rich summary of experimentation with more inclusive models of conservation in terms of ecological social political and economic indicators. Published with the Southern African Sustainable Use Specialist Group SASUSG of IUCN. *Links Between Biodiversity Conservation, Livelihoods and Food Security* Sue Mainka, Mandar Trivedi, 2002. The global use of wild animals for meat is now the primary illegal activity in many protected areas and growing human populations and a lack of livelihood options suggest that demand for wild meat is likely to continue to rise. This Occasional Paper contains the background information presented to participants at a workshop jointly organized by IUCN, FAO and TRAFFIC in Yaounde, Cameroon. The workshop aimed to forge functional links among the various stakeholders concerned with the unsustainable use of wild fauna for food and it contains the communiqué and a summary of the discussions related to problems and solutions. *Sustainable Development of Natural Resources and Wildlife Conservation* Ashwani Kumar Dubey, 2015-01-01. The human use of nature is a polarizing topic in India and across the globe often perceived as contradictory to traditional exclusionary conservation. However India's natural landscapes serve as important sources of biological resources for many communities. This collection of case studies on sustainable use practices throughout India aims to identify the policies, management strategies and knowledge contexts that contribute to resource use without damaging biological diversity. Through a diverse array of personal accounts, stories and photographs from the field and ongoing research studies across biogeographic zones, readers will connect with academics, practitioners, managers and policy analysts who challenge us to rethink the conservation paradigm. These chapters provide a reflection on the history of conservation and sustainable use in India and illuminate a path towards a local and global future in which biodiversity and human well-being go hand in hand. The wide variety of authors in this book reflects the broad audience this book will be of interest to: from students studying environmental conservation and sustainability to researchers, practitioners and policymakers who work in the field and seek to learn about successful sustainable use systems and resulting lessons that have widespread application. This book will appeal to readers interested in the areas of environment sciences, biodiversity management, sustainable development, developmental studies, forestry, wildlife and protected area management, public policy, environmental policy and governance. **Conservation of Biological Resources** E. J. Milner-Gulland, Ruth Mace, 2009-07-15. This book presents the issues surrounding the conservation of wild species and ecosystems used by people. It is aimed at final year undergraduate and master's students taking courses in conservation, environmental management, ecological economics and related subjects as well as conservation professionals including managers, policy makers and researchers. The structure of the book is ideal for a course in conservation.

comprising a theoretical section written by the authors and a set of ten contributed case studies intentionally diverse in discipline geographical region and system of study The theoretical section provides the knowledge that is needed to understand the issues while the case studies can form the basis of seminars Readers will emerge with a clear recognition of the difficulties of limiting the harvesting of biological resources to sustainable levels and of the boundaries of sustainable use as a conservation tool The authors an ecologist and an anthropologist have both worked on the conservation and sustainable use of wildlife for several years including the ivory and rhino horn trades The first book to examine the issues underlying the sustainable use debate in a fully interdisciplinary manner Both the theoretical section and the case studies approach the issues using methods from economics ecology anthropology and other fields Designed as a course textbook combining a theoretical section with invited case studies written by expert practitioners in the field Outlines the new direction that conservation biology and thus conservation biologists must take if it is to be successful

Harvesting Wild Species Curtis H. Freese, 1997 In Harvesting Wild Species Curtis Freese draws together a diverse group of authorities to discuss the conditions under which commercial use may serve as a conservation tool Presenting fifteen case studies from around the world in areas ranging from fisheries and forestry to non timber forest products and trophy hunting the authors explore the link between sustainable development and biodiversity conservation Based on a study commissioned by the World Wide Fund for Nature Harvesting Wild Species aims to raise among environmentalists policy makers funding agencies students and researchers an awareness of the role of economic incentives in conservation efforts
