David Archibald,2011-03-15 This study identifies the fall of dinosaurs as the factor that allowed mammals to evolve into the dominant tetrapod form It refutes the single cause impact theory for dinosaur extinction and demonstrates that multiple factors massive volcanic eruptions loss of shallow seas and extraterrestrial impact likely led to their demise While their avian relatives ultimately survived and thrived terrestrial dinosaurs did not Taking their place as the dominant land and sea tetrapods were mammals whose radiation was explosive following nonavian dinosaur extinction The author argues that because of dinosaurs Mesozoic mammals changed relatively slowly for 145 million years compared to the prodigious Cenozoic radiation that followed Finally out from under the shadow of the giant reptiles Cenozoic mammals evolved into the forms we recognize today in a mere ten million years after dinosaur extinction **Project Learning Tree** ,1994

Biogeography ,1999 [Alien Species in North America and Hawaii](#) George W. Cox,1999-09 The world is in the midst of an ecological explosion with devastating implications Thousands of species of microbes plants and animals are being introduced both deliberately and inadvertently to new land areas seas and freshwaters In many regions these new colonists are running wild disrupting the dynamics of ecosystems pushing native species toward extinction and causing billions of

dollars in direct economic damages Alien Species in North America and Hawaii provides a comprehensive overview of the invasive species phenomenon examining the threats posed and the damage that has already been done to ecosystems across North America and Hawaii George W Cox considers both the biological theory underlying invasions and the potential and actual effects on ecosystems and human activities His book offers a framework for understanding the problem and provides a detailed examination of species and regions Specific chapters examine North American invaders and their threats how exotic species are dispersed to new regions how physical and biotic features influence the establishment and spread of invasives patterns of exotic invasions with separate chapters covering each of the ten most seriously invaded regions and ecosystems patterns of invasiveness exhibited by major groups of exotics the theory of invasive capability of alien species and the resistance of communities to invasion theoretical aspects of ecosystem impacts of invaders and the evolutionary interaction of invaders and natives management and public policy issues Alien Species in North America and Hawaii offers for the first time an assessment and synthesis of the problem of invasive species in North American and Hawaiian ecosystems Scientists conservation professionals policymakers and anyone involved with the study and control of invasive species will find the book an essential guide and reference to one of the most serious and widespread threats to global biodiversity
