Conserving Rain Forests Martin Banks,1990-02 Describes the rapidity with which the rain forests of the world are being destroyed the harm to plants animals and humans and remedies for preserving the rain forests **Conservation and Management of Tropical Rainforests, 2nd Edition** Eberhard F Bruenig,2016-12-07 This new edition of Conservation and Management of Tropical Rainforests applies the large body of knowledge experience and tradition available to those who study tropical rainforests Revised and updated in light of developments in science technology economics politics etc and their effects on tropical forests it describes the principles of integrated conservation and management that lead to sustainability identifying the unifying phenomena that regulate the processes within the rainforest and that are fundamental to the ecosystem viability Features of the natural forest and the socio cultural ecosystems which can be mimicked in the design of self sustaining forests are also discussed A holistic approach to the management and conservation of rainforests is developed throughout the book The focus on South East Asian forestry will be widened to include Africa and Latin America Recent controversial issues such as biofuels and carbon credits with respect to tropical forests and their inhabitants will be discussed This book is a substantial contribution to the literature it is a valuable resource for all those concerned with rainforests 50 Simple Steps to Save the World's Rainforests Kim Henderson,The Green Patriot Working Group,2012-03-12 Despite the very best conservation and environmental policy making efforts at least 80 000 acres of tropical rainforest disappear each day If action is not taken now experts estimate that the world s rainforests will mostly disappear within 50 years Currently the destruction of tropical forests is responsible for 17 percent of man made carbon emissions more than what comes from all the world s cars airplanes and ships combined Tropical rainforests need our help and that s where 50 Simple Steps to Save the World s Rainforests comes in The future of the world s rainforests lies to a large extent in the collective hands of consumers and how they shop since demand is what fuels the forces driving deforestation agriculture logging and resource extraction Through the 50 step journey you will learn how as a consumer you may unwittingly support rainforest destruction and more importantly precisely how you can make different choices that help save rainforests For example you will learn how your paper use and purchases of rayon clothing affect Indonesian rainforests where Sumatran tigers are critically endangered or how simply eating Brazil nuts helps save the Amazon rainforest You will discover how the cultivation of palm oil a common ingredient in confections baked goods soaps and biofuels is fueling rampant deforestation in Malaysia Indonesia and Papua New Guinea and how you can avoid it 50 Simple Steps to Save the Rainforests is the ultimate primer for anyone wanting to take action to help save this ecosystem which is so critical to the future of mankind *The Conservation Atlas of Tropical Forests* N.Mark Collins,1991-06-18 The first of a series designed to cover all tropical rain forests in the world This is a visual portfolio of detailed maps of Asia accompanied by a text which seeks to analyze the extent and causes of deforestation and to point a way towards sustainable forest development *The*

Conservation Atlas of Tropical Forests Jeffrey Sayer, 1992-06-18 Recognizing that sound information is vital to the progress of conservation IUCN have gathered together a visual portfolio of maps of rain forests in Africa The accompanying text analyzes the extent and causes of deforestation and points a way towards sustainable forest development Timber Production and Biodiversity Conservation in Tropical Rain Forests Andrew Grieser Johns, 1997-07-10 How timber production and tropical biodiversity conservation can be balanced **Tropical Rain Forest Ecology, Diversity, and Conservation** Jaboury Ghazoul, Douglas Sheil, 2024-03-14 Rain forests represent the world's richest repository of terrestrial biodiversity and play a major role in regulating the global climate They support the livelihoods of a substantial proportion of the world's population and are the source of many internationally traded commodities They remain despite decades of conservation attention increasingly vulnerable to degradation and clearance with profound though often uncertain future costs to global society Understanding the ecology of these diverse biomes and peoples dependencies on them is fundamental to their future management and conservation *Tropical Rain Forest Ecology Diversity and Conservation* introduces and explores what rain forests are how they arose what they contain how they function and how humans use and impact them The book starts by introducing the variety of rain forest plants fungi microorganisms and animals emphasising the spectacular diversity that is the motivation for their conservation The central chapters describe the origins of rain forest communities the variety of rain forest formations and their ecology and dynamics The challenge of explaining the species richness of rain forest communities lies at the heart of ecological theory and forms a common theme throughout The book's final section considers historical and current interactions of humans and rain forests It explores biodiversity conservation as well as livelihood security for the many communities that are dependent on rain forests inextricable issues that represent urgent priorities for scientists conservationists and policy makers **Conserving Tropical Forests and Biological Diversity**, 1989 *Conservation of the Rain Forest* Julie Murray, 2022-12-15 This title explores why conserving rain forests is so important and the ways in which it can be done This title is at a Level 2 and is written specifically for emerging readers Aligned to Common Core Standards correlated to state standards Dash is an imprint of Abdo Zoom a division of ABDO Conservation of Tropical Rainforests Brian Joseph McFarland, 2017-11-14 This book critically engages with how the conservation of tropical rainforests is financed Beginning with the context of tropical deforestation alongside an overview of tropical ecology global environmental policy and finance the book reviews several conservation financing instruments These include ecotourism and private reserves debt for nature swaps and government domestic budgetary expenditures for state and national parks Tropical deforestation and forest degradation are serious global environmental issues contributing to global climate change species extinction and threatening the livelihoods of forest dependent communities Yet many leading companies individuals and governments are making a positive impact on tropical forest conservation to mitigate greenhouse gas emissions through the use of conservation finance *Conservation of Tropical Rainforests* tells the history of international conservation finance and provides

a variety of options for individuals businesses and governments to support conservation financing projects

Tropical Forest Conservation Douglas Southgate,1998-06-04 Attempts to halt the destruction of rain forests and other natural habitats in the tropics have met with little success In particular national parks like those found in wealthy nations have proven difficult to establish in Africa Asia and South and Central America More often than not people inhabiting areas designated for protection resist being told by outsiders that they must change how and where they live Alternative approaches frequently embodied in integrated conservation and development projects ICDPs are now being pursued The goal is to address local communities desires for improved standards of living while simultaneously meeting conservation objectives Nature based tourism and sustainable harvesting of forest products are the centerpieces of ICDPs and related initiatives This book assesses the viability of conservation strategies predicated on the adoption of environmentally sound enterprises in and around threatened habitats Drawing on research in Brazil Costa Rica Ecuador and Peru and on his extensive experience working in South and Central America and the Caribbean the author demonstrates that it is rare for forest dwellers to derive much benefit from ecotourism the extraction of timber and other commodities or the collection of samples used in pharmaceutical research Often these activities are simply unprofitable Even when they are profitable the benefits tend not to accrue locally but instead are captured by outside firms and individuals who can provide important services like safe and reliable transportation The author contends that human capital formation and related productivity enhancing investment is the only sure path to economic progress and habitat conservation
