Constraint And Integer Programming Toward A Unified Methodology:

Constraint and Integer Programming Michela Milano, 2003-11-30 Constraint and Integer Programming presents some of the basic ideas of constraint programming and mathematical programming explores approaches to integration brings us up to date on heuristic methods and attempts to discern future directions in this fast moving field **Constraint and Integer Programming** Michela Milano, 2011-05-08 Constraint and Integer Programming presents some of the basic ideas of constraint programming and mathematical programming explores approaches to integration brings us up to date on heuristic methods and attempts to discern future directions in this fast moving field Principles and Practice of Constraint Programming - CP 2007 Christian Bessiere, 2007-09-06 This book constitutes the refereed proceedings of the 13th International Conference on Principles and Practice of Constraint Programming CP 2007 It contains 51 revised full papers and 14 revised short papers presented together with eight application papers and the abstracts of two invited lectures All current issues of computing with constraints are addressed ranging from methodological and foundational aspects to solving real world problems in various application fields Recent Advances in Constraints Francisco Azevedo, Pedro Barahona, Francois Fages, Francesca Rossi, 2007-08-19 This book constitutes the thoroughly refereed and extended post proceedings of the 11th Annual ERCIM International Workshop on Constraint Solving and Constraint Logic Programming CSCP 2006 held in Caparica Portugal in June 2006 The papers are organized in topical sections on global constraints search and heuristics language and implementation issues and modeling **Hybrid Optimization** Pascal van Hentenryck, Michela Milano, 2010-11-05 Hybrid Optimization focuses on the application of artificial intelligence and operations research techniques to constraint programming for solving combinatorial optimization problems This book covers the most relevant topics investigated in the last ten years by leading experts in the field and speculates about future directions for research This book includes contributions by experts from different but related areas of research including constraint programming decision theory operations research SAT artificial intelligence as well as others These diverse perspectives are actively combined and contrasted in order to evaluate their relative advantages This volume presents techniques for hybrid modeling integrated solving strategies including global constraints decomposition techniques use of relaxations and search strategies including tree search local search and metaheuristics Various applications of the techniques presented as well as supplementary computational tools are also discussed **Integration of AI and OR Techniques in Constraint Programming for Combinatorial Optimization Problems** Willem-Jan van Hoeve, John N. Hooker, 2009-05-17 This book constitutes the refereed proceedings of the 6th International Conference on Integration of AI and OR Techniques in Constraint Programming for Combinatorial Optimization Problems CPAIOR 2009 held in Pittsburgh PA USA in May 2009 The 20 revised full papers and 10 extended abstracts presented together with 2 invited talks were carefully reviewed and selected from 65 submissions The papers describe current research in the fields of constraint programming artificial

intelligence and operations research and present new techniques or new applications in combinatorial optimization thus exploring ways of solving large scale practical optimization problems through integration and hybridization of the fields different techniques

Integrated Methods for Optimization John N. Hooker, 2007-02-10 Integrated Methods for Optimization integrates the key concepts of Mathematical Programming and Constraint Programming into a unified framework that allows them to be generalized and combined The unification of MP and CP creates optimization methods that have much greater modeling power increased computational speed and a sizeable reduction computational coding Hence the benefits of this integration are substantial providing the Applied Sciences with a powerful high level modeling solution for optimization problems As reviewers of the book have noted this integration along with constraint programming being incorporated into a number of programming languages brings the field a step closer to being able to simply state a problem and having the computer solve it John Hooker is a leading researcher in both the Optimization and Constraint Programming research communities He has been an instrumental principal for this integration and over the years he has given numerous presentations and tutorials on the integration of these two areas It is felt by many in the field that the future Optimization courses will increasingly be taught from this integrated framework
