The Comprehensive Handbook of Constructivist Teaching James Pelech, 2010-02-01 While many people talk about the Constructivist philosophy there has not been a publication that provides a detailed description of what a Constructivist classroom sounds like and looks like This book fills that void by examining the philosophy translating it into teaching strategies and providing over forty examples These examples come from the elementary level up to and including the collegiate level and include all content areas These examples show how the Constructivist educator uses the linguistic mode the visual mode and the kinesthetic mode to create a class environment in which the Constructivist philosophy flourishes Examples of student work are provided the book also includes chapters on note taking Problem Based Learning PBL action research and other Constructivist resources Written in user friendly form this book presents a concrete

The Practice of Constructivism in Science Education Kenneth G. Tobin, 2012-11-12 This volume provides a needed elaboration of theories and potential applications of constructivism in science education Although the term constructivism is used widely there has been a dearth of materials to guide science educators concerning the potential of constructivism to influence what is done in the field In fact there has been a tendency for constructivism to be viewed as a method that can be used in a classroom This view tends to diminish the power of constructivism as a way of thinking about education and in particular about science education The chapters in this book address the need to document the theoretical roots of constructivism and to describe how practitioners have applied constructivist oriented beliefs in the practice of K 12 teaching of science and mathematics as well as teacher education Not only does this book contain different theoretical perspectives on constructivism but it also features a chapter that critiques constructivism as an epistemology Specific topics covered include cooperative learning the negotiation of meaning problem centered learning social construction of knowledge science in culturally diverse settings curriculum planning and implementation and instructional technology Issues associated with the preparation and enhancement of science teachers and the reform of science education are also explored

Proof and Other Dilemmas Bonnie Gold, Roger A. Simons, 2008 During the first 75 years of the twentieth century almost all work in the philosophy of mathematics concerned foundational questions In the last quarter of the century philosophers of mathematics began to return to basic questions concerning the philosophy of mathematics such as what is the nature of mathematical knowledge and of mathematical objects and how is mathematics related to science Two new schools of philosophy of mathematics social constructivism and structuralism were added to the four traditional views formalism intuitionism logicism and platonism The advent of the computer led to proofs and the development of mathematics assisted by computer and to questions of the role of the computer in mathematics This book of 16 essays all written specifically for this volume is the first to explore this range of new developments in a language accessible to mathematicians Approximately half the essays were written by mathematicians and consider questions that philosophers are not yet discussing The other half written by philosophers of mathematics summarize the discussion in that community during the last 35 years In each case a connection is made to issues relevant to the teach of mathematics

Political Authority Michael Buckley, **Conceptualizing International Practices** Alena Drieschova, Christian Bueger, Ted Hopf, 2022-06-23 This book provides new directions for international practice theory demonstrating its key strengths and benefits as an innovative research perspective Constructivism and the Technology of Instruction Thomas M. Duffy, David H. Jonassen, 2013-01-11 This book is about the implications of constructivism for instructional design practices and more importantly it is about a dialogue between instructional developers and learning theorists Working with colleagues in each discipline the editors were amazed to find a general lack of familiarity with each others work From an instructional design perspective it seems that the practice of instructional design must be based on some conception of how people learn and what it means to learn From a learning theory perspective it seems obvious that the value of learning theory rests in the ability to predict the impact of alternative learning environments or instructional practices on what is learned

Thus the interchange of ideas between these disciplines is essential As a consequence of both the information rich environment and the technological capability business is seen moving away from a fixed curriculum and toward providing information and instruction when it is needed These changes bring about a window of opportunity establishing a dialogue that will provide for a richer understanding of learning and the instructional environment required to achieve that learning The editors hope that this book is the beginning of the conversation and that it will serve to spur continued conversation between those involved in learning theory and those involved in the design of instruction
