Consumer Policy from Below Kai-Uwe Hellmann,Ansgar Klein,Bernward Baule,2024-06-10 Since its existence in the 1950s consumer policy in Germany has been understood and pursued primarily as a bundle of actions and measures initiated and institutionalised by the state In many cases the state has also issued corresponding mandates and set up support models which has created the impression that we are basically dealing with a consumer policy from above imposed by macro politics Not that there have not been repeated attempts in the past decades to give impetus to consumer policy from the middle of civil society often in the form of small citizens initiatives And in recent years in particular a number of new consumer organisations have emerged which operate much closer to the grass roots Nevertheless the impression seems to have taken root among the large government related players in the field who have been in the business for decades not to mention government internal consumer policy that consumer policy concerns a policy field that is essentially ordered by a collaboration of the state on the one hand and consumer protection organisations representing all consumers equally on the other while the many small consumer initiatives not even started by individual committed consumers regularly fall behind in comparison This perspective refers largely to the view of and from the centre of politics This volume is intended to go some way towards countering the institutionally prevailing impression that in principle there is only consumer policy from above that is really effective and assertive The translation was done with the help of artificial intelligence A subsequent human revision was done primarily in terms of content NCERT Business Studies Class - 12 Dr. S.
