Dredged Material Ocean Dumping, 1992 This document provides a useful easy to access annotated bibliography of essential and secondary policy and technical documents relating to dredged material disposal A statutory and regulatory overview is presented for background information on dredged material disposal Page v Processes, Assessment and Remediation of Contaminated Sediments Danny D. Reible, 2013-07-20 The purpose of this book is to help engineers and scientists better understand contaminated sediment sites and identify and design remedial approaches that are more efficient and effective Contaminated sediment management is a difficult and costly exercise that is rarely addressed with easily identified and implemented remedies It is hoped that this book can help identify and implement management approaches that provide an optimal if not entirely satisfactory solution to sediment contaminant problems

Providence River and Harbor Maintenance Dredging Project, 2001 Monitoring Ecological Condition in the Western United States Shabeg S. Sandhu, Brian D. Melzian, Edward R. Long, Walter G. Whitford, Barbara T. Walton, 2012-12-06 The monitoring of point sources by the Environmental Protection Agency EPA the states and the tribes has documented and helped reduce the levels of chemical stressors affecting our ecosystems With the controls on point sources reducing chemical contamination new environmental challenges associated with nonpoint sources have emerged To adequately deal with these new problems EPA s Office of Research and Development recognized the need to develop an overall understanding of the condition of our ecological resources the trends in their condition and the stressors affecting these systems on a broad scale Toward this end the Environmental Monitoring and

Assessment Program EMAP was established by EPA and has been strategically developing the scientific tools and techniques to monitor and assess the status and trends of aquatic ecosystems EMAP scientists have developed new indicators and probability based designs to fill data gaps in the development of regional scale assessments of our aquatic resources as required in the Clean Water Act We have a scientifically defensible approach that allows 100 percent coverage of the aquatic resources within broad geographic areas and the formulation of reference conditions for establishing the health of these resources The use of these indicators and designs were successfully demonstrated in the landscapes streams and estuaries of the mid Atlantic states as part of the Mid Atlantic Integrated Assessment MAIA *Assessment and Remediation of Contaminated Sediments* Danny Reible,Tomas Lanczos,2007-01-21 Contaminated sediments pose some of the most difficult site remediation issues Contaminated sediments typically reside in spatially variable and dynamic systems subject to seasonal flow variations and episodic storm events The volume of sediments that must be managed at particular sites often exceeds one million cubic meters dwarfing many contaminated soil sites These sediments are also associated with equally daunting volumes of water and efforts to remove the contamination typically entrains even more water The environmental security of both NATO and partner countries is at risk due to the pervasive nature of sediment contamination of rivers lakes and harbors A NATO Advanced Research Workshop was convened in Bratislava in May 2005 to discuss current approaches to managing contaminated sediments and to identify research necessary to overcome outstanding problems In this text drawn from presentations and discussion of that workshop current approaches to the assessment and remediation of contaminated sediments will be discussed with the emphasis on in situ management Physical chemical and biological approaches for the assessment and remediation of sediments are all addressed Developing regulatory and strategic approaches are highlighted with a special emphasis on the potential for biological remediation for the management of contaminated sediments
