Constitutive Equations For Polymer Melts And Solutions:

Constitutive Equations for Polymer Melts and Solutions Ronald G. Larson, 2013-10-22 Constitutive Equations for Polymer Melts and Solutions presents a description of important constitutive equations for stress and birefringence in polymer melts as well as in dilute and concentrated solutions of flexible and rigid polymers and in liquid crystalline materials. The book serves as an introduction and guide to constitutive equations and to molecular and phenomenological theories of polymer motion and flow. The chapters in the text discuss topics on the flow phenomena commonly associated with viscoelasticity, fundamental elementary models for understanding the rheology of melts, solutions of flexible polymers, and advanced constitutive equations for melts and concentrated solutions of flexible polymer and the rheological properties of real liquid crystal polymers. Chemical engineers and physicists will find the text very useful. *Constitutive Equations for Polymer Melts and Solutions* Ronald G. Gogos, 1979 The first comprehensive and functionally useful engineering analysis of underlying principles and mechanisms. Takes a novel approach suggesting that any of the prevailing processing methods can be broken down into a shaping step and into a set of clearly defined elementary steps that prepare the polymeric raw material for shaping. The shaping steps include calendaring and coating, die forming, mold coating, molding and casting, and secondary shaping, whereas the elementary steps are handling of particulate solids, melting, pressurization and pumping, mixing and stripping, and devolatilization. **Predictions of Double-step Stress Relaxations Using a Novel Constitutive Equation for Polymer Melts and Concentrated Solutions** Shin-ichi Kihara, Kazumori Funatsu, American Institute of Chemical Engineers, American Institute of Chemical Engineers.
