## **Constructing Science In Elementary Classrooms:**

*Constructing Science in Elementary Classrooms* Norman G. Lederman, Judith S. Lederman, Randy L. Bell, 2004 Solidly based on the National Science Education Standards and Benchmarks for Science Literacy this new elementary science methods text immerses students into the context of classroom instruction through the authors unique approach using The Teaching Cycle The text is divided into three major sections or clusters of chapters Goals of Science Instruction Setting the Stage and The Teaching Cycle The first two sections provide the theoretical and practical foundations for instruction while the third section provides content Section I presents an overall view of science as a way of knowing and eventually develops an argument for why science should be included in the curriculum at all Section II emphasizes the importance of connecting lessons and avoiding the tendency to present individual science lessons in isolation The major content chapters comprising Section III The Teaching Cycle Life Environmental Science Physical Science Earth and Space Science each incorporate the traditional topics of methods courses e g demonstrations laboratories classroom management assessment developmental psychology etc concepts and themes common to national reforms

*Constructing Meaning in a Science Methods Course for Prospective Elementary Teachers* Barbara S. Spector, 2016-02-10 How do prospective elementary science teachers think This case study reveals thinking patterns common to preservice elementary teachers identifies their behavioral characteristics while learning to teach science which are not commonly noted in current literature provides change strategies to accelerate preservice elementary teachers embracing the holistic constructivist inquiry practice based paradigm consistent with the standards set by the curriculum The chapters in this book immerse the reader in a sequence of episodes in this science methods course and reveal the adventure of turning theory into practice while analyzing student student student instructor interactions and their outcomes in an inquiry driven flipped classroom Strategies presented empower preservice elementary teachers to implement national and state standards change science learning teaching from business as usual to applying science and engineering practices in the classroom make cognitive and behavioral changes required to shift paradigms and eliminate science anxiety pass through stages of grief inherent in the loss of dominant mechanistic paradigm This book will interest a wide readership including science educators scientists and engineers administrators supervisors and elementary teachers in a clinical education setting preservice elementary teachers and anyone seeking to improve STEM education in elementary schools

*Elementary Science Methods* Andrew Martin, David Jerner Martin, 2002-07 This popular text is the first science methods book to truly practice what it preaches using a constructivist approach to guide students in learning how to teach in a constructivist manner The text includes a wealth of open ended inquiry activities such as Constructing Your Ideas for students to complete in class These activities help students to construct their own personal conceptualizations about teaching science in the elementary school This text also features over 170 process oriented activities for children including Constructing Science in the Classroom and In the Schools each keyed to grade levels and each open ended so

teachers can encourage children to develop and perform their own investigations All activities are linked to National Science Education Standards for appropriate content professional development assessment and teaching and the activities contain suggestions of appropriate accompanying children s literature Martin s text takes the approach that it is more important for children to learn how to do science than it is for them to learn about science Children learn how to do science by mastering the scientific processes and applying them in inquiries into scientific questions Employing the constructivist approach teachers help children form personally constructed meanings from their own experience and thought The text is predicated on the reality that teachers of elementary science do not need to know a great deal of science to be good science teachers but need to be co inquirers with their students      *Teaching Science in Elementary and Middle School* Joseph S. Krajcik, 2008
