Construction Engineering Networks D. G. Carmichael, 1989 **Construction Engineering Networks** David Gordon Carmichael, 1989 *Artificial Neural Networks for Civil Engineers* Ian Flood, Nabil Kartam, 1998-01-01 Sponsored by the Committee on Expert Systems and Artificial Intelligence of the Technical Council on Computer Practices of ASCE This report illustrates advanced methods and new developments in the application of artificial neural networks to solve problems in civil engineering Topics include evaluating new construction technologies using multi layered artificial neural network architecture to overcome problems with conventional traffic signal control systems increasing the computational efficiency of an optimization model predicting carbonation depth in concrete structures detecting defects in concrete piles analyzing pavement systems using neural network hybrids to select the most appropriate bidders for a construction project and predicting the Energy Performance Index of residential buildings Many of the ideas and techniques discussed in this book cross across disciplinary boundaries and therefore should be of interest to all civil engineers **Techniques for Construction Network Scheduling** James D. Stevens, 1990-03 This new book is for courses in construction scheduling and construction planning in departments of civil engineering building science engineering technology or architecture It provides a step by step approach to construction network scheduling and integrates the use of microcomputers to accomplish it The book also contains a small case study the Jimbeau Project that runs throughout the text to illustrate the various network scheduling techniques that can be used on a construction project **Construction Engineering Network Techniques** David Gordon Carmichael, 1983 **Future Challenges in Evaluating and Managing Sustainable Development in the Built Environment** Peter S. Brandon, Patrizia Lombardi, Geoffrey Q. Shen, 2024-09-23 Future Challenges in Sustainable Development within the Built Environment stimulates and reinterprets the demands of Responsible and Sustainable Development in the Built Environment for future action and development It examines the methods of evaluation the use of technology the creation of new models and the role of human factors for examining and developing the subject over the next twenty years **Introduction to Civil Engineering Systems** Samuel Labi, 2014-04-07 This book presents an integrated systems approach to the evaluation analysis design and maintenance of civil engineering systems Addressing recent concerns about the world s aging civil infrastructure and its environmental impact the author makes the case for why any civil infrastructure should be seen as part of a larger whole He walks readers through all phases of a civil project from feasibility assessment to construction to operations explaining how to evaluate tasks and challenges at each phase using a holistic approach Unique coverage of ethics legal issues and management is also included Optimization and Artificial Intelligence in Civil and Structural Engineering B.H. Topping, 2013-03-14 This volume and its companion volume includes the edited versions of the principal lectures and selected papers presented at the NATO Advanced Study Institute on Optimization and Decision Support Systems in Civil Engineering The Institute was held in the Department of Civil Engineering at Heriot Watt

University Edinburgh from June 25th to July 6th 1989 and was attended by eighty participants from Universities and Research Institutes around the world A number of practising civil and structural engineers also attended The lectures and papers have been divided into two volumes to reflect the dual themes of the Institute namely Optimization and Decision Support Systems in Civil Engineering Planning for this ASI commenced in late 1986 when Andrew Templeman and I discussed developments in the use of the systems approach in civil engineering A little later it became clear that much of this approach could be realised through the use of knowledge based systems and artificial intelligence techniques Both Don Grierson and John Gero indicated at an early stage how important it would be to include knowledge based systems within the scope of the Institute The title of the Institute could have been Civil Engineering Systems as this would have reflected the range of systems applications to civil engineering problems considered by the Institute These volumes therefore reflect the full range of these problems including structural analysis and design water resources engineering geotechnical engineering transportation and environmental engineering Artificial Neural Networks for Civil Engineers Ian Flood,Nabil Kartam,American Society of Civil Engineers. Expert Systems and Artificial Intelligence Committee,1998-01-01 Artificial neural networks represent a broad and rapidly developing technology featuring new systems and novel ways of applying established systems This monograph illustrates advanced methods and recent developments in applying artificial neural network concepts in civil engineering **Monthly Catalog of United States Government Publications** ,1983-08
