Excerpt from Structural Waterproofing A Waterproofing Handbook and Reference Guide for the Use of Architects Engineers Building Contractors and Others Interested in the General Subjects of Waterproofing and Dampproofing His is the era of concrete construction For a number of years past the use of concrete as a building material has been growing by leaps and bounds It is most natural that this should be the case Concrete is the most ideal building material known It is durable and fireproof It provides rapidity in construction and economy in labor It has in fact few limitations Its natural absorbent property however had a tendency to limit its use in certain directions There seemed to be no reason though why this difficulty could not be overcome and the use of concrete further extended by eliminating this absorbent characteristic It seemed logical that the introduction of some element into the concrete during the process of mixing would accomplish this purpose and add to the other splendid qualities of concrete the highest degree of impermeability As later events demonstrated this proved true and it is when in a waterproofed state that concrete finds its highest and most complete expression Out of this idea itself however together with its subsequent development has grown the science of integral waterproofing But because of the comparative newness of integral waterproofing as a science there has been little organized literature or data on the subject The architect and engineer faced with a condition where waterproofing seemed necessary or desiring to extend his use of concrete by some effective system of waterproofing has found difficulty in knowing where to turn for instruction or

suggestion In other words the science of waterproofing has lacked a handbook to which the builder could turn as a reference guide This Architectural and Engineering Edition of Structural Waterproofing is an endeavor to supply this deficiency and to place at the disposal of the architect and engineer a thoroughly organized and complete handbook upon the entire subject of integral waterproofing The theory underlying waterproofing the nature of waterproofing compounds a discussion of their chemical and physical characteristics and their practical use in mass concrete cement plaster coat and stucco are all fully dealt with in the various chapters of this book We hope very sincerely that Structural Waterproofing will fulfill a much needed requirement in supplying full information upon the subject to all persons who may be interested About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
