Construction Claims A Quantitative Approach:

Construction Claims James J. Adrian, 1988 **Infrastructure Development and Construction Management** J. C. Edison, 2020-10-12 This is a comprehensive book on infrastructure development and construction management. It is written keeping in mind the curricula of construction management programmes in India and abroad. It covers infrastructure development, the construction industry in India, financial analysis of the real estate industry in India, economic analysis of projects, tendering and bidding, contracts and contract management, FIDIC conditions of contract, construction disputes and claims, arbitration, conciliation and dispute resolution, international construction project exports and identifying, analysing and managing construction project risk. Thus, this book covers most of the construction management activities that are carried out at different stages of a construction project. This is an essential book for students of construction management, construction professionals, academicians and researchers.

Construction Site Planning and Logistical Operations Randy R. Rapp, Bradley L. Benhart, 2015-02-15 Organizing and administering a construction site so that the right resources get to the right place in a timely fashion demands strong leadership and a rigorous process. Good logistical operations are essential to profitability and this book is the essential muddy boots guide to efficient site management. Written by experienced educator/practitioners from the world leading Building Construction Management program at Purdue University, this volume is the ultimate guide to the knowledge, skills and abilities that need to be mastered by project superintendents. Observations about leadership imperatives and techniques are included. Organizationally, the book follows site-related activities from bidding to project closeout. Beyond outlining broad project managerial practices, the authors drill into operational issues such as temporary soils and drainage structures, common equipment and logistics. The content is primarily geared for the manager of a domestic or small commercial building construction project but includes some reference to public and international work where techniques, practices and decision making can be substantially different. The book is structured into five sections and fifteen chapters. This facilitates ready adaptation either to industry training seminars or to university courses.
