**Techniques of Variational Analysis** Jonathan Borwein, Qiji Zhu, 2006-06-18 Borwein is an authority in the area of mathematical optimization and his book makes an important contribution to variational analysis Provides a good introduction to the topic     Regularity Concepts in Nonsmooth Analysis Messaoud Bounkhel, 2011-11-12 The results presented in this book are a product of research conducted by the author independently and in collaboration with other researchers in the field In this light this work encompasses the most recent collection of various concepts of regularity and nonsmooth analysis into one monograph The first part of the book attempts to present an accessible and thorough introduction to nonsmooth analysis theory Main concepts and some useful results are stated and illustrated through examples and exercises The second part gathers the most prominent and recent results of various regularity concepts of sets functions and set valued mappings in nonsmooth analysis The third and final section contains six different application with comments in relation to the existing literature     *Variational Analysis and Generalized Differentiation I* Boris S. Mordukhovich, 2006-08-08 Variational analysis is a fruitful area in mathematics that on one hand deals with the study of optimization and equilibrium problems and on the other hand applies optimization perturbation and approximation ideas to the analysis of a broad range of problems that may not be of a variational nature This monograph in 2 volumes contains a comprehensive and state of the art study of the basic concepts and principles of variational analysis and generalized differentiation in both finite dimensional and infinite dimensional spaces and presents numerous applications to problems in optimization equilibria stability and sensitivity control theory economics mechanics etc The first volume is devoted to the basic theory of variational analysis and generalized differentiations while the second volume describes various applications Both volumes include abundant bibliographies and extensive commentaries     Constructive, Experimental, and Nonlinear Analysis Michel A. Théra, 2000 Presents 20 papers on different aspects of modern analysis including analytic and computational number theory symbolic and numerical computation theoretical and computational optimization and recent development in non smooth and functional analysis with applications to control theory Applications in algorithmic number theory and tomography are also discussed Many of the papers originated at a September 1999 workshop held at the University of Limoges Among the topics are vector valued perturbed minimization principles rotundity related to Lipschitz separation continued fractions comparison algorithms and fine structure constants and codirectional compactness metric regularity and subdifferential calculus No index Annotation copyrighted by Book News Inc Portland OR     *Variational Analysis and Generalized Differentiation II* Boris S. Mordukhovich, 2006-03-02 Comprehensive and state of the art study of the basic concepts and principles of variational analysis and generalized differentiation in both finite dimensional and infinite dimensional spaces Presents numerous applications to problems in the optimization equilibria stability and sensitivity control theory economics mechanics etc     *Perturbation Analysis of Optimization Problems* J. Frederic Bonnans, Alexander Shapiro, 2000-05-11 A presentation of

general results for discussing local optimality and computation of the expansion of value function and approximate solution of optimization problems followed by their application to various fields from physics to economics The book is thus an opportunity for popularizing these techniques among researchers involved in other sciences including users of optimization in a wide sense in mechanics physics statistics finance and economics Of use to research professionals including graduate students at an advanced level     *Mathematical Reviews* ,2001     **Journal of Nonlinear and Convex Analysis** ,2005
