## **Constructive Models:**

*Model Theory and Applications* O.V. Belegadek, This volume is a collection of papers on model theory and its applications The longest paper Model Theory of Unitriangular Groups by O V Belegadek forms a subtle general theory behind Mal'tsev's famous correspondence between rings and groups This is the first published paper on the topic Given the present model theoretic interest in algebraic groups Belegadek's work is of particular interest to logicians and algebraists The rest of the collection consists of papers on various questions of model theory mainly on stability theory Contributors are leading Russian researchers in the field     *Recursive Model Theory*, 1998-11-30 *Recursive Model Theory*     *Handbook of Dynamic System Modeling* Paul A. Fishwick, 2007-06-01 The topic of dynamic models tends to be splintered across various disciplines making it difficult to uniformly study the subject Moreover the models have a variety of representations from traditional mathematical notations to diagrammatic and immersive depictions Collecting all of these expressions of dynamic models the Handbook of Dynamic Systems     *Countable Boolean Algebras and Decidability* Sergey Goncharov, 1997-01-31 This book describes the latest Russian research covering the structure and algorithmic properties of Boolean algebras from the algebraic and model theoretic points of view A significantly revised version of the author's Countable Boolean Algebras Nauka Novosibirsk 1989 the text presents new results as well as a selection of open questions on Boolean algebras Other current features include discussions of the Ketonen algebras in enrichments by ideals and automorphisms and the properties of the automorphism groups     *Constructive Models* Yuri L. Ershov, Sergei S. Goncharov, 2013-09-14 The theory of constructive recursive models follows from works of Froehlich Shepherdson Mal'tsev Kuznetsov Rabin and Vaught in the 50s Within the framework of this theory algorithmic properties of abstract models are investigated by constructing representations on the set of natural numbers and studying relations between algorithmic and structural properties of these models This book is a very readable exposition of the modern theory of constructive models and describes methods and approaches developed by representatives of the Siberian school of algebra and logic and some other researchers in particular Nerode and his colleagues The main themes are the existence of recursive models and applications to fields algebras and ordered sets Ershov the existence of decidable prime models Goncharov Harrington the existence of decidable saturated models Morley the existence of decidable homogeneous models Goncharov and Peretyatkin properties of the Ehrenfeucht theories Millar Ash and Reed the theory of algorithmic dimension and conditions of autostability Goncharov Ash Shore Khusainov Ventsov and others and the theory of computable classes of models with various properties Future perspectives of the theory of constructive models are also discussed Most of the results in the book are presented in monograph form for the first time The theory of constructive models serves as a basis for recursive mathematics It is also useful in computer science in particular in the study of programming languages higher level languages of specification abstract data types and problems of synthesis and verification of programs Therefore the book will be useful for not only specialists in mathematical logic and

the theory of algorithms but also for scientists interested in the mathematical fundamentals of computer science The authors are eminent specialists in mathematical logic They have established fundamental results on elementary theories model theory the theory of algorithms field theory group theory applied logic computable numberings the theory of constructive models and the theoretical computer science
