Constructive Real Analysis:

Real Analysis Mark Bridger, 2011-10-14 A unique approach to analysis that lets you apply mathematics across a range of subjects This innovative text sets forth a thoroughly rigorous modern account of the theoretical underpinnings of calculus continuity differentiability and convergence Using a constructive approach every proof of every result is direct and ultimately computationally verifiable In particular existence is never established by showing that the assumption of non existence leads to a contradiction The ultimate consequence of this method is that it makes sense not just to math majors but also to students from all branches of the sciences The text begins with a construction of the real numbers beginning with the rationals using interval arithmetic This introduces readers to the reasoning and proof writing skills necessary for doing and communicating mathematics and it sets the foundation for the rest of the text which includes Early use of the Completeness Theorem to prove a helpful Inverse Function Theorem Sequences limits and series and the careful derivation of formulas and estimates for important functions Emphasis on uniform continuity and its consequences such as boundedness and the extension of uniformly continuous functions from dense subsets Construction of the Riemann integral for functions uniformly continuous on an interval and its extension to improper integrals Differentiation emphasizing the derivative as a function rather than a pointwise limit Properties of sequences and series of continuous and differentiable functions Fourier series and an introduction to more advanced ideas in functional analysis Examples throughout the text demonstrate the application of new concepts Readers can test their own skills with problems and projects ranging in difficulty from basic to challenging This book is designed mainly for an undergraduate course and the author understands that many readers will not go on to more advanced pure mathematics He therefore emphasizes an approach to mathematical analysis that can be applied across a range of subjects in engineering and the sciences

Constructive Real Analysis Allen A. Goldstein, 2013-05-20 This text introduces students of mathematics science and technology to the methods of applied functional analysis and applied convexity Topics include iterations and fixed points metric spaces nonlinear programming applications to integral equations and more 1967 edition

Real Analysis: A Constructive Approach Through Interval Arithmetic Mark Bridger, 2019-07-05 Real Analysis A Constructive Approach Through Interval Arithmetic presents a careful treatment of calculus and its theoretical underpinnings from the constructivist point of view This leads to an important and unique feature of this book All existence proofs are direct so showing that the numbers or functions in question exist means exactly that they can be explicitly calculated For example at the very beginning the real numbers are shown to exist because they are constructed from the rationals using interval arithmetic This approach with its clear analogy to scientific measurement with tolerances is taken throughout the book and makes the subject especially relevant and appealing to students with an interest in computing applied mathematics the sciences and engineering The first part of the book contains all the usual material in a standard one semester course in analysis of functions of a single real variable continuity uniform not pointwise derivatives

integrals and convergence The second part contains enough more technical material including an introduction to complex variables and Fourier series to fill out a full year course Throughout the book the emphasis on rigorous and direct proofs is supported by an abundance of examples exercises and projects many with hints at the end of every section The exposition is informal but exceptionally clear and well motivated throughout

Le_fman,1984-12-31 The basis of this book was a special course given by the author at the Mechanics Mathematics Faculty of Moscow University The material presumes almost no previous knowledge and is completely understandable to a reader who is in command of a standard course of mathematical analysis There are an extensive bibliography and indexes which will be helpful to students

Formalizing Constructive Real Analysis Cornell University. Dept. of Computer Science, M. B.

Forester,1993 This paper arises from a project with the Nuprl Proof Development System which involved formalizing parts of real analysis up through the intermediate value theorem Extensive development of the rational library was required as the real library was being built resulting in the addition of about 125 rational theorems The real library now contains about 150 theorems and includes enough basic results that further extensions of the library should be quite feasible This paper aims to illustrate how higher mathematics can be implemented in a system like Nuprl and also to introduce system users to the library

The Continuum Rudolf Taschner,2012-12-06 Few mathematical structures have undergone as many revisions or have been presented in as many guises as the real numbers Every generation re examines the reals in the light of its values and mathematical objectives This citation is said to be due to Gian Carlo Rota and in this book its correctness again is affirmed Here I propose to investigate the structure of the mathematical continuum by undertaking a rather unconventional access to the real numbers the intuitionistic one The traces can be tracked back at least to L E J Brouwer and to H Weyl Largely unknown photographs of Weyl in Switzerland after World War II provided by Peter Bettschart enliven the abstract text full of subtle definitions and sophisticated estimations The book can be read by students who have undertaken the usual analysis courses and want to know more about the intrinsic details of the underlying concepts and it can also be used by university teachers in lectures for advanced undergraduates and in seminars for graduate students I wish to thank Walter Lummerding and Gottfried Oehl who helped me with their impressive expert knowledge of the English language I also take the opportunity to express my gratitude to Ulrike Schmickler Hirzebruch and to the staff of Vieweg Verlag for editing my manuscript just now exactly 50 years after the death of Hermann Weyl in their renowned publishing house Vienna 2005

Techniques of Constructive Analysis Douglas S. Bridges, Luminata Simona Vita,2007-04-30 This book is an introduction to constructive mathematics with an emphasis on techniques and results obtained in the last twenty years The text covers fundamental theory of the real line and metric spaces focusing on locatedness in normed spaces and with

associated results about operators and their adjoints on a Hilbert space The first appendix gathers together some basic notions about sets and orders the second gives the axioms for intuitionistic logic No background in intuitionistic logic or constructive analysis is needed in order to read the book but some familiarity with the classical theories of metric normed and Hilbert spaces is necessary Logics and Type Systems in Theory and Practice Venanzio Capretta,Robbert Krebbers,Freek Wiedijk,2024-05-21 This Festschrift dedicated to Herman Geuvers on the occasion of his 60th birthday contains papers written by many of his closest collaborators Herman Geuvers is a full professor at Radboud University Nijmegen and holds a part time professorship at Eindhoven University of Technology He received his PhD from Radboud University in 1993 and he was promoted to full professor in Computer Assisted Reasoning in 2006 Prof Geuvers is an internationally renowned researcher in the field of proof assistants logic in computer science lambda calculus and type theory He has been a steering committee chair of the TYPES and FSCD conferences chair of related EU Cost Action projects and program chair or editor of related conferences and special issues in the area of computer science logic He is a successful generous and inspiring advisor and educator He has been director of education and director of research of the Computer Science Institute at Radboud University Nijmegen and he is currently chair of the examination board of computer science and chair of the board of the Institute for Programming Research and Algorithmics a Dutch national inter university research school The contributions in this volume reflect Prof Geuvers main research interests **Constructive Real Numbers and Constructive Function Spaces** Nikolai Aleksandrovich Shanin,1968 This book is devoted to certain problems of constructive mathematical analysis I The basic sections are Chapters II and III which are devoted to the foundations of the theory of constructive function spaces Information from the theory of constructive real numbers needed in these chapters is presented in the first chapter The first chapter also contains other material in it the logicomathematical symbolism which we shall use is described and some problems of constructive mathematical logic are considered **Constructivity in Computer Science** J.Paul Jr. Myers,Michael J. O'Donnell,1992-06-24 Mathematicians have long recognized the distinction between an argument showing that an interesting object exists and a procedure for actually constructing the object Computer science adds a new dimension of interest in constructivity since a computer program is a formal description of a constructive procedure that can be executed automatically It has been over a decade since a conference was devoted to constructivity and never before has one been held specifically relating computer science to constructivity Thus this proceedings volume is the most concentrated offering ever produced of the diverse ways in which constructivity and computer science are related The papers cover semantics and type theory logic and theorem proving real and complex analysis topology and combinatorics nonconstructive graph theoretical techniques and curriculum and pedagogic issues The book offers a concentrated view of the many ways in which constructivity has assumed importance in computer science and contains results available nowhere else **Encyclopaedia of Mathematics** M. Constructive Analysis E. Bishop,Douglas Bridges,2012-12-06 This work grew out of Errett Bishop s fundamental treatise *Foundations of Constructive Analysis* FCA which appeared in 1967 and which contained the bountiful harvest of a remarkably short period of research by its author Truly FCA was an exceptional book not only because of the quantity of original material it contained but also as a demonstration of the practicability of a program which most mathematicians believed impossible to carry out Errett s book went out of print shortly after its publication and no second edition was produced by its publishers Some years later by a set of curious chances it was agreed that a new edition of FCA would be published by Springer Verlag the revision being carried out by me under Errett s supervision at the same time Errett generously insisted that I become a joint author The revision turned out to be much more substantial than we had anticipated and took longer than we would have wished Indeed tragically Errett died before the work was completed The present book is the result of our efforts Although substantially based on FCA it contains so much new material and such full revision and expansion of the old that it is essentially a new book For this reason and also to preserve the integrity of the original I decided to give our joint work a title of its own Most of the new material outside Chapter 5 originated with Errett

Foundations of Constructive Analysis Errett Bishop,2012-07 This book *Foundations of Constructive Analysis* founded the field of constructive analysis because it proved most of the important theorems in real analysis by constructive methods The author Errett Albert Bishop born July 10 1928 was an American mathematician known for his work on analysis In the later part of his life Bishop was seen as the leading mathematician in the area of Constructive mathematics From 1965 until his death he was professor at the University of California at San Diego
