Consumer Behavior And Energy Policy:

Consumer Behavior and Energy Policy Eric Monnier,1986-11-07 **Consumer Behavior and Energy Conservation** P. Ester,2012-12-06 **Consumers and Energy Conservation** John D. Claxton,1981 Routledge Handbook of Energy Economics Uğur Soytaş,Ramazan Sarı,2019-09-23 Energy consumption and production have major influences on the economy environment and society but in return they are also influenced by how the economy is structured how the social institutions work and how the society deals with environmental degradation The need for integrated assessment of the relationship between energy economy environment and society is clear and this handbook offers an in depth review of all four pillars of the energy economy environment society nexus Bringing together contributions from all over the world this handbook includes sections devoted to each of the four pillars Moreover as the financialization of commodity markets has made risk analysis more complicated and intriguing the sections also cover energy commodity markets and their links to other financial and non financial markets In addition econometric modeling and the forecasting of energy needs as well as energy prices and volatilities are also explored Each part emphasizes the multidisciplinary nature of the energy economics field and from this perspective chapters offer a review of models and methods used in the literature The Routledge Handbook of Energy Economics will be of great interest to all those studying and researching in the area of energy economics It offers guideline suggestions for policy makers as well as for future research *The Cambridge Handbook of Psychology and Economic Behaviour* Alan Lewis,2018-02-15 There has recently been an escalated interest in the interface between psychology and economics The Cambridge Handbook of Psychology and Economic Behaviour is a valuable reference dedicated to improving our understanding of the economic mind and economic behaviour Employing empirical methods including laboratory and field experiments observations questionnaires and interviews the Handbook provides comprehensive coverage of theory and method financial and consumer behaviour the environment and biological perspectives This second edition also includes new chapters on topics such as neuroeconomics unemployment debt behavioural public finance and cutting edge work on fuzzy trace theory and robots cyborgs and consumption With distinguished contributors from a variety of countries and theoretical backgrounds the Handbook is an important step forward in the improvement of communications between the disciplines of psychology and economics that will appeal to academic researchers and graduates in economic psychology and behavioral economics **Understanding the Human Factor of the Energy Transition: Mechanisms Underlying Energy-Relevant Decisions and Behaviors** Tobias Brosch,David Sander,Martin K. Patel,2016-06-27 An increasing number of countries are shifting toward sustainable energy economies emphasizing the use of renewable energy sources increases in energy efficiency and the abatement of greenhouse gas emissions The success of such an energy transition will depend not only on the development of new energy technologies but also on major changes in the patterns of individual energy related decisions and behaviors resulting in substantial

reductions in energy demand. Consequently the behavioral sciences can make important contributions to the energy transition by increasing our understanding of the multiple factors and mechanisms that underlie individual as well as group based decisions and behaviors in the energy domain and by creating a basis for systematic interventions that reduce energy usage. Many different types of relevant behaviors and decisions need to be considered in this context including decisions to invest in energy efficient household equipment, adjustments of energy critical habits related to heating, eating or mode of transportation and participation in the political discourse related to questions of energy. An integration of the expertise of the different disciplines of the behavioral sciences is thus needed to comprehensively investigate the impact of the different drivers and barriers that may determine energy related decisions and behaviors including economic factors such as price level, social factors such as norms, communication patterns and social learning processes and individual factors such as values, attitudes, beliefs, heuristics, affective biases and emotions. The potential impact of these factors on the success of the energy transition is considerable. For example, a recent projection of the energy demand in Switzerland until 2050 has estimated the reduction potential related to psychological and sociological factors between 0% and 30% depending on which behavioral changes will be implemented in society. Increased research efforts from the behavioral sciences are required to ensure that the full reduction potential can be achieved. This Research Topic brings together contributions from different disciplines such as psychology, affective science, behavioral economics, economics, sociology, consumer behavior, business science, sociology and political science that improve our understanding of the many factors underlying decision making and behavior in the energy domain and contribute to the development of targeted interventions that aim at reducing energy demand based on these factors.

, 1976 **Diffusion of Innovative Energy Services** Anna Kowalska-Pyzalska, 2023-08-25. Diffusion of Innovative Energy Services: Consumers' Acceptance and Willingness to Pay consolidates research in the diffusion, adoption and acceptance of innovative energy services (IES) including dynamic green electricity tariffs, small scale energy generators and smart metering information systems among residential electricity consumers. The book addresses consumer awareness, acceptance and engagement towards smart technologies focusing on the willingness to pay for IES. Chapters address findings from field experiments, pilot programs and simulation methods such as agent based modeling. Case studies involve various countries and continents with a focus on modern, pro environmental and sustainable economies where IES are offered. Policy

recommendations tools and interventions as well as behavioral strategies conclude the work Consolidates and integrates key findings across economic behavioral and social elements of IES diffusion Addresses the economic appraisal of IES covering consumers willingness to pay and the intention behavior gap phenomenon Reviews current literature regarding consumers acceptance and engagement towards IES based on field experiments pilot programs modelling and simulation Provides policy recommendations marketing tools and interventions as well as the behavioral strategies necessary to enhance IES market position alongside climate policy goals *JMR, Journal of Marketing Research* ,1985
