

ASTRONOMIA CONTEMPORÁNEA

The background of the book cover is a vibrant space scene. In the lower right, a large, detailed view of the Earth's horizon shows swirling white clouds over a blue ocean and brownish-green landmasses. In the upper right, a satellite with a complex array of solar panels and instruments is shown in orbit. In the lower left, a satellite with a large, gold-colored, textured dish antenna and several white rectangular panels is also in orbit. The background is a deep black space filled with numerous bright stars, some with prominent diffraction spikes, and a faint, glowing nebula or galaxy structure on the left side.

The

Birth of Modern Astronomy Harm J. Habing, 2019-03-23

This richly illustrated book discusses the ways in which astronomy expanded after 1945 from a modest discipline to a robust and modern science. It begins with an introduction to the state of astronomy in 1945 before recounting how in the following years initial observations were made in hitherto unexplored ranges of wavelengths such as X radiation, infrared radiation, and radio waves. These led to the serendipitous discovery of more than a dozen new phenomena including quasars and neutron stars that each triggered a new area of research. The book goes on to discuss how after 1985 the further systematic exploration of the earlier discoveries led to long term planning and the construction of new large telescopes on Earth and in Space. Key scientific highlights described in the text are the detection of exoplanets, 1995 the unexpected discovery of the accelerated expansion of the Universe, 1999 a generally accepted model for the large scale properties of the Universe, 2003 and the CDM theory, 2005 that explains how the galaxies and stars of the present Universe were formed from minute irregularities in the almost homogenous gas that filled the early Universe. All these major scientific achievements came at a price, namely the need to introduce two new phenomena that are as yet unexplained by physics: inflation and dark energy. Probably the deepest unsolved question has to be: Why did all of this start with a Big Bang?

Secrets of the Hoary Deep Riccardo Giacconi, 2021-05-04

A Noble Prize winning Italian astrophysicist shares his scientific autobiography and the history of the development of contemporary astronomy. The discovery of x rays continues to have a profound effect on the field of astronomy. It has opened the cosmos to exploration in ways previously unimaginable and fundamentally altered the methods for pursuing information about outer space. Nobel Prize winner Riccardo Giacconi's highly personal account of the birth and evolution of x ray astronomy reveals the science people and institutional settings behind this important and influential discipline. Part history, part memoir, and part cutting edge science, *Secrets of the Hoary Deep* is the tale of x ray astronomy from its infancy through what can only be called its early adulthood. It also details how the tools, techniques, and practices designed to support and develop x ray astronomy were transferred to optical, infrared, and radio astronomy, drastically altering the face of modern space exploration. Giacconi relates the basic techniques developed at American Science and Engineering and explains how, where, and by whom the science was advanced. From the first Earth orbiting x ray satellite, Uhuru, to the opening of the Space Telescope Science Institute and the lift off of the Hubble Space Telescope to the construction of the Very Large Telescope, Giacconi recounts the ways in which the management methods and scientific methodology behind successful astronomy projects came to set the standards of operations for all subsequent space and Earth based observatories. Along the way he
