Contemporary Approaches In Stuttering Therapy:

Contemporary Approaches in Stuttering Therapy Maryann Peins, 1984 The Treatment of Stuttering in the Young School Aged Child Roberta Lees, 2005-03-11 This practical text brings together well known writers from the UK USA and Australia It sets out to discuss the assessment and treatment of the young school aged child who stutters aged approx 7 to 12 years A number of differing treatment approaches for this client group are presented in the one volume The contributors as well as describing their treatment approaches have considered the theoretical models on which their approaches are based and ways of measuring outcomes an important topic in an age of evidence based practice In order to gain a more comprehensive view of the school aged child one chapter considers epidemiology of stuttering whilst two chapters address the issue of concomitant problems such as other language problems and ADHD This text is written for students and clinicians working with children who stutter It will also be of interest to researchers Brain and Behavior in Child Psychiatry Aribert Rothenberger, 2012-12-06 The Brain What Else All senses are connected with the brain From sense perception derives knowledge In the brain is the sovereignty of the mind Mind is interpreted by the brain Alcmaeon of Croton 5th Century B c The ground is shifting under the traditional approaches to problems in the philosophy of mind Earlier doctrines concerning the independence of cognition from the brain now appear untenable P S Churchland 20th Century A D It is not objective of this volume to discuss the history and significance of neuroscience for philosophy from a developmental perspective although this would be a rather interesting topic Its object is the relationship between brain and behavior in children as exhibited by higher mental functions e g speech and language reasoning perception free will and control of motor acts dependence of behavior on neuronal constraints the self of the child and therapeutic activity Child psychiatrists commonly allude to the brain as the site of disturbance responsible for many developmental disabilities and psychopathological syndromes identifiable by observing behavior e g dyslexia delusions neurological examination e g soft signs psychological test performance e g Bender Gestalt Test EEG e g alpha theta ratio and CCT e g pseudoatrophy While there is nothing inherently wrong with such inferences the fact is frequently overlooked that there is no specific set of brain behavior relationships validating these inferences **Linguistic Disorders and Pathologies** Gerhard Blanken, Jürgen Dittmann, Hannelore Grimm, John C. Stuttering, an Integration of Contemporary Therapies Barry Guitar, Theodore J. Peters, 1980 In recent years most disagreement about stuttering therapy has boiled down to a preference for one of two major approaches Some clinicians have preferred to help stutterers learn not to avoid stuttering but to approach it and to learn to stutter in simpler and easier ways this approach is known as stuttering modification therapy Proponents of the fluency shaping therapy on the other hand teach stutterers to speak in a fluent pattern that can be gradually shaped to normal sounding speech in all situations This book illustrates how it is both possible and desirable to integrate and coordinate these two therapeutic approaches while still retaining the advantages of both The five chapters address 1 comparison of stuttering modification and fluency shaping therapies 2 preliminary comments on diagnostic and treatment procedures 3 the high school and adult stutterer 4 the elementary school child who stutters and 5 the preschool child who stutters CB
