Rojas,Francisco-Julián Martínez-Cano,2024-10-22 Revolutionizing Communication The Role of Artificial Intelligence explores
the wide ranging effects of artificial intelligence AI on how we connect and communicate changing social interactions
relationships and the very structure of our society Through insightful analysis practical examples and knowledgeable
perspectives the book examines chatbots virtual assistants natural language processing and more It shows how these
technologies have a significant impact on cultural productions business education ethics advertising media journalism and
interpersonal interactions Revolutionizing Communication is a guide to comprehending the present and future of
communication in the era of AI It provides invaluable insights for professionals academics and everyone interested in the

Zhang,Stefan Wermter,Fuchun Sun,Changshui Zhang,Andreas K. Engel,Brigitte Röder,Xiaolan Fu,Gui Xue,2023-02-02 The
purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and
robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of
interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple
sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with
information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a
continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk
learning to read and write learning to understand language and its referents etc In all these examples visual auditory
somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of
acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social
cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in
Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global
perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific
enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is
quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a
single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own
perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend
to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent
progress in artificial intelligence robotics psychology and neuroscience **ACM SIGGRAPH 87** ,1987 *The Software*
