ReCulturing: Design Your Company Culture to Connect with Strategy and Purpose for Lasting Success Melissa Daimler,2022-05-10 Leverage the power of systems thinking to clarify your purpose build your strategy and design your culture It s no secret that culture is key to attracting and engaging top talent But the vast majority of culture efforts fail as quickly as they started Why Because leaders are creating and communicating organizational values but they re failing to connect those values to their behaviors processes and practices of the organization ReCulturing is the playbook for building a business in which employees are clear on the why what and how they are working ReCulturing is not a one time change effort because culture is not something we ultimately have but rather something we do One of today s most renowned thought leaders and practitioners on the issue Melissa Daimler provides a modern definition of culture that is more of a verb than a noun Culture needs to be reviewed consistently just like strategy and purpose Focusing on these three areas leads to higher performance and engagement In the pages of this book you ll learn A powerful framework for designing and evolving organizational culture that goes beyond values to also include behaviors processes and practices How to embed behaviors into core people processes like hiring onboarding talent managing offboarding strategizing and decision making How to integrate why you work what you do and how you do it into an employee experience Why it s crucial to make sure a company s practices evolve as the company changes The book also features illuminating real life stories recounting what has and hasn t worked at some of today s largest and most influential companies Whether you re launching a startup running a global firm or overseeing the shift to a hybrid work setting ReCulturing provides everything you need to the kind of culture that drives long term business success American Journal of Public Health ,2008 *Cloud Computing. Actionable Architecture* Mathews George,2014-01-23 Script from the year 2011 in the subject Computer Science Technical Computer Science grade 2 0 language English abstract This paper will demonstrate a pragmatic methodology used in conjunction with UML unified modeling language BPMN business process modeling notation along with engineering principles for describing an actionable architecture for cloud computing in the real world The fundamental paradigm of cloud computing whether it is for private or public usage revolves around the provisioning of services for everyone through rich resources that can be synergized through

Internet based protocols The true definition of Cloud Computing is according to the author all about the practicalities of outsourcing all aspects of using computing resources to some form of external agency This means that the assumption for any cloud computing usage is the fact that the agency has a powerful resource base hardware software infrastructure platforms power supply backups failover mechanisms as well as management skills Therefore all users of the cloud computing services provided by the agency can work in a well defined demand supply mode with an insurmountable base of possible fault tolerant mechanisms to support best possible user experiences The user will have the unique experience of not being worried about where his her work is being done because cloud computing as defined above will enable him her to work in a virtualized environment but with the feeling of being close to the resources However the apparent ease available through cloud computing will raise problems associated with diverse types of risks Hence it is imperative to define new architectural blueprints as well as the associated business processes around them so as to provide measurable metrics that will allay the fears of any user The architectural blueprint is not just meant to be a lot of diagrams and documents but they are to be modeled as actionable artifacts These actionable artifacts will allow for operational excellence that covers all types of functional as well as non functional requirements that any user expects The MDA model driven architecture approach coupled with BPM business process modeling and engineering principles as posited in this paper will allow for management of distributed communication scheduling security enhancements and rights as well as many other aspects that will make the user experience enjoyable and successful
