## **Communication Satellites Their History And Future:**

**The History and Future of Technology** Robert U. Ayres, 2021-07-27 Eminent physicist and economist Robert Ayres examines the history of technology as a change agent in society focusing on societal roots rather than technology as an autonomous self-perpetuating phenomenon. With rare exceptions, technology is developed in response to societal needs that have evolutionary roots and causes. In our genus *Homo*, language evolved in response to a need for our ancestors to communicate both in the moment and to posterity. A band of hunters had no chance in competition with predators that were larger and faster without this type of organization, which eventually gave birth to writing and music. The steam engine did not leap fully formed from the brain of James Watt. It evolved from a need to pump water out of coal mines driven by a need to burn coal instead of firewood in turn due to deforestation. Later, the steam engine made machines and mechanization possible. Even quite simple machines increased human productivity by a factor of hundreds if not thousands. That was the Industrial Revolution. If we count electricity and the automobile as a second industrial revolution and the digital computer as the beginning of a third, the world is now on the cusp of a fourth revolution led by microbiology. These industrial revolutions have benefited many in the short term but devastated the Earth's ecosystems. Can technology save the human race from the catastrophic consequences of its past success? That is the question this book will try to answer. **Dynamics of Meteor**

**Outbursts and Satellite Mitigation Strategies** Glenn E. Peterson, 1999 The potential threat posed by Leonid meteoroids to orbiting spacecraft over the next several years calls for new dynamic mitigation strategies to assist the satellite community in reducing the danger to its vehicles. This book offers deliberate dynamic mitigation strategies to complement the traditional shielding strategies, providing mission operators additional ways to decrease the danger. Five different attitude control and orbit maneuvering options are examined in detail. The information is presented in algorithmic form to allow technically competent but meteoroid-inexperienced operators to easily understand the phenomena, assess the danger, and implement procedures. Although general in scope, the book emphasizes the Leonid meteor events of the 1998-2002 timeframe.
