Mark, IEEE Communications Society, 2007-01-09 The Best of the Best Fifty Years of Communications and Networking Research consists of a group of 50 papers selected as the best published by ComSoc in its various journals in the Society's 50 year history The editors of the collection have written an essay to introduce the papers and discuss the historical significance of the collection and how they were selected for the collection The book divides the papers into two major categories Communications and Networking and groups them by decade within these major subdivisions **Communication, transmission, and transportation networks**, 1971 *TRANSMISSION, SWITCHING and ROUTING in communication networks* Lucian IOAN, Graziela Niculescu, Marius Vochin, 2021-07-14 The telecommunications network is a global system of equipment and means that ensures the connections between the users of communication services with the transmission and reception of the information involved It is a set of communication nodes in which processing procedures take place for the transmission and reception of information signals switching connections and choosing routes between nodes to make connections between sources and destinations of communications and a set of links between these nodes made in a variety of technologies This volume contains 5 chapters in which the different processes and types of systems within the telecommunications network are presented Energy Transmission and Synchronization in Complex Networks Nicolás Rubido, 2015-08-20 This work tackles the problems of understanding how energy is transmitted and distributed in power grids as well as in determining how robust this transmission and distribution is when modifications to the grid or power occur The most important outcome is the derivation of explicit relationships between the structure of the grid the optimal transmission and distribution of energy and the grid's collective behavior namely the synchronous generation of power These relationships are extremely relevant for the design of resilient power grid models To allow the reader to apply these results to other complex systems the thesis includes a review of relevant aspects of network theory spectral theory and novel analytical calculations to predict the existence and stability of periodic collective behavior in complex networks of phase oscillators which constitute a paradigmatic model for many complex systems *Information Technology and Intelligent Transportation Systems* Xiangmo Zhao, Valentina Emilia Balas, 2019-01-15 Intelligent Transportation Systems ITS are the model for integrating advanced information technology data communication transmission technology electronic sensing technology control technology and computer technology into a comprehensive ground traffic management system They are the direction of development for future transportation systems This book presents the proceedings of the 3rd International Conference on Information Technology and Intelligent Transportation Systems ITITS
