**Network Bioscience, 2nd Edition** Marco Pellegrini, Marco Antoniotti, Bud Mishra, 2020-03-27 Network science has accelerated a deep and successful trend in research that influences a range of disciplines like mathematics, graph theory, physics, statistics, data science and computer science, just to name a few, and adapts the relevant techniques and insights to address relevant but disparate social, biological, technological questions. We are now in an era of big biological data supported by cost effective high throughput genomic, transcriptomic, proteomic, metabolomic data collection techniques that allow one to take snapshots of the cells' molecular profiles in a systematic fashion. Moreover, recently also phenotypic data, data on diseases, symptoms, patients etc. are being collected at a nation wide level, thus giving us another source of highly related causal big data. This wealth of data is usually modeled as networks aka binary relations, graphs or webs of interactions including protein-protein, metabolic, signaling and transcription regulatory interactions. The network model is a key view point leading to the uncovering of mesoscale phenomena, thus providing an essential bridge between the observable phenotypes and omics underlying mechanisms. Moreover, network analysis is a powerful hypothesis generation tool guiding the scientific cycle of data gathering, data interpretation, hypothesis generation and hypothesis testing. A major challenge in contemporary research is the synthesis of deep insights coming from network science with the wealth of data, often noisy, contradictory, incomplete and difficult to replicate, so to answer meaningful

biological questions in a quantifiable way using static and dynamic properties of biological networks      **Human And Machine Perception: Communication, Interaction, And Integration** Sergio Vitulano, Virginio Cantoni, Vito Di Gesu, Alessandra Setti, Roberto Marmo, 2005-09-19 The theme of this book on human and machine perception is communication interaction and integration For each basic topic there are invited lectures corresponding to approaches in nature and machines and a panel discussion The lectures present the state of the art outlining open questions and stressing synergies among the disciplines related to perception The panel discussions are forums for open debate The wide spectrum of topics allows comparison and synergy and can stimulate new approaches      **Structure, Motion, Interaction and Expression of Biological Macromolecules** Ramaswamy H.
