**Communications and Networks** Ian F. Blake,H. Vincent Poor,2012-12-06 The areas of communications computer networks and signal processing have undergone rapid development over the past several years The advent of VLSI circuitry and increasingly sophisticated computer hardware and software techniques have made possible the construction of systems and signal processors for communications applications not contemplated only a short time ago The increasing complexity of communication systems both by themselves and in land based or satellite networks has created a greater need for finding useful mathematical techniques for their analysis The rapidly evolving technologies involved continue to find exciting new areas for application and it remains a challenge for researchers to keep abreast of developments In this volume researchers from a broad cross section of the areas of communications signal processing and computer networks have been invited to contribute articles to assist readers in learning about the current state of research and future research directions in their area The authors were not given tight guidelines for their contributions and thus the character and emphasis of each chapter differs Although the scope of the areas considered is necessarily limited in a volume of this size the coverage here is quite broad and it is hoped that the reader will find the contents of this volume to be interesting useful and informative *Recent Advances in Communication Networks and Embedded Systems* Smain Femmam,Pascal Lorenz,2024-05-11 This book is devoted to enhanced version of selected papers presented at the 7th International Conference on Communication and Network Technology ICCNT 2023 The objective of the proceedings of ICCNT 2023 is to present the recent research results and technological advances in the fields of theoretical and experimental applications of embedded systems communications and signal processing decision as well as in emerging areas related to the tracks of the conference The specific topics of interest within the scope of this special issue include design tools for electronics and embedded systems embedded systems and software system on chip SoC multiprocessor system on chip MPSoC platforms and applications network on chip NoC design methodologies reconfigurable computing system design synthesis and optimization advanced communications circuits and systems for communications optical fibers applications optical communications sensors image laser applications in telemetry LiDAR system anemometry computer 3D visions range technique RF and wireless communications image and signal processing decision image and video processing technology compression coding and implementation cryptology and watermarking real time systems sensors and instrumentation data acquisition audio acoustic speech biomedical signal processing sensor microsystems and industrial sensors computer engineering and networks cloud computing technology internet technology computer security computing networks and data acquisition *Next Generation Marine Wireless Communication Networks* Bin Lin,Jianli Duan,Mengqi Han,Lin X. Cai,2022-04-25 This book presents a novel framework design for the next generation Marine Wireless Communication Networks MWCNs The authors first provide an overview of MWCNs followed by a discussion of challenges in the design and development of MWCNs in support of a diversity of marine

services such as real time marine monitoring offshore oil exploration drilling marine tourism and fishing The authors then propose cross layer networking solutions to achieve a high performance modern MWCN that enables efficient and reliable data transmissions under hostile marine environment which include the network deployment the physical layer channel coding intelligent network access and resource management and learning based opportunistic routing Finally the authors summarize the book and present some open issues that will lead to new research directions in the next generation MWCNs
